Real Estate Lead Gen AI Prompt Pack

70+ outcome-driven prompts to generate listings, nurture leads and automate follow-ups.

Real estate conversations die in the gaps. A lead emails at 8:40pm and hears back Monday. A buyer asks one question about a tax bill and goes quiet for six weeks. A seller wonders what happened to the weekend open house and never gets an honest debrief. This pack closes those gaps with prompts you can paste into any AI assistant and adapt in under five minutes.

Inside are **70+ numbered, outcome-driven prompts** covering the workflows that actually move inventory: writing listing descriptions and MLS copy, marketing open houses, nurturing new buyers, pre-approved buyers and first-time buyers separately, keeping sellers informed, handling price objections, explaining valuations, replying fast to inbound leads, writing social content, activating referral partners and past clients, reactivating old database contacts, and carrying clients from contract to close and review.

You also get **12 ready-to-use artifact templates** — email sequences, call scripts, social post sets, an Instagram carousel outline, an SMS/WhatsApp follow-up flow, a valuation conversation guide and a review request message — each one laid out with exact sections, exact columns and exact cadence so you can drop a client's real details in and send.

Everything is organized by workflow. Nothing is theoretical. Every prompt names its inputs as `{{placeholders}}`, tells you where to use it, and tells you what a good output looks like so you can tell good copy from plausible filler.

Format: PDF + Notion. The PDF is for printing and sharing with your team; the Notion version is for copying directly into your CRM notes, your listing templates, and your email/SMS workflows.

Compliance & Accuracy

> **Read this before you use a single prompt in this pack.**
>
> Every prompt in this pack produces *draft* material that a licensed agent must review, edit, and approve before it goes anywhere. AI writes fast and confidently, and confidence is not accuracy. You are accountable for every word that reaches a consumer, a client, or a regulator.

Rules that apply to every output in this pack

1. **Local advertising rules first.** State, provincial, and municipal real estate advertising rules vary and change. Many jurisdictions now regulate marketing copy, brokerage name usage, team branding, and comparative market statements directly. Before publishing anything generated here, confirm the copy complies with the advertising rules of the state or province where the property sits, with your brokerage's standards, and with MLS rules for the board covering that property.
2. **Fair housing guidance is non-negotiable.** Generated copy must never describe a property or area in ways that steer, target, or exclude protected classes — race, color, religion, national origin, familial status, disability, sex, sexual orientation, gender identity, or any other class protected under applicable fair housing law. This includes the language people use casually: "good schools," "safe neighborhood," "ideal for families," "quiet building," "Christian-friendly area," "perfect for a young couple," or "not great for kids." Replace subjective neighborhood claims with verifiable, factual attributes — square footage, year built, lot size, commute time to a named landmark, school assignment (only if you can source it and you are permitted to name it).
3. **Respect platform-specific character limits.** MLS public remarks fields, email subject lines, SMS segments, Instagram captions, LinkedIn posts, and X posts all have hard limits, and several count characters differently (some count Unicode code points, some count grapheme clusters, some truncate). The prompts ask the AI to target specific lengths — verify with a character counter before publishing, and never let a platform auto-truncate a compliance disclaimer or a required disclosure.
4. **Review all AI-generated claims about property features before publishing.** This is the rule agents skip and then regret. AI will happily invent a finished basement, a new roof, a three-car garage, a water view, a "$40,000 kitchen renovation," central air, or a "quiet cul-de-sac" because those are plausible details, not because anyone verified them. Every claim about structure, systems, appliances, renovations, permits, utilities, water, sewer, storage, parking, views, orientation, and dimensions must be checked against the listing sheet, the MLS record, seller disclosure documents, and your own inspection of the property. Delete any claim you cannot source.

5. **Accuracy also covers numbers.** Square footage, lot size, year built, bed and bath counts, HOA dues, tax figures, utility costs, days on market, comparable sales, and price-per-square-foot must come from verified records, not from the model's assumptions.
6. **Never let a prompt invent legal, tax, lending, or inspection conclusions.** These prompts do not replace a licensed attorney, a tax advisor, a lender, or a home inspector. If a prompt's output contains a legal or financial conclusion, rewrite it into a statement of fact or a referral.
7. **Consent and channel rules still apply.** SMS and WhatsApp templates in this pack assume the recipient has opted in and that the platform's messaging rules are satisfied. Send commercial messages only where consent exists, honor opt-outs immediately, and include required sender identification.
8. **Disclosure obligations are yours.** If your market requires seller disclosure statements, agency disclosures, brokerage advertising statements, equal housing opportunity language, or offer-of-compensation language in marketing, add them and place them exactly where the rule requires. This pack does not know your jurisdiction and does not guess.

Pre-publish accuracy checklist

Run this checklist on every AI-generated asset before it goes to a client, a lead, or a public channel. If any row fails, fix it or cut it.

Check	What you are verifying	Typical failure to catch
Feature claims	Every feature, finish, system and renovation exists and is disclosed	"Brand-new HVAC," "custom built-ins," "solar panels"
Dimensions	Beds, baths, above/below grade, sqft, lot size, parking	Model rounds 1,840 sqft to "nearly 2,000"
Financial figures	Price, HOA dues, taxes, utility estimates, price per sqft	Model estimates taxes from a neighboring street
Location descriptions	Fair housing compliance, no steering, no safety or school claims	"Family-friendly," "safe," "good schools"
Comparative claims	No "best," "cheapest," "highest ROI" without substantiation	"Best value in the neighborhood"
Compliance language	Required disclosure, brokerage identification, offer-of-compensation language	Missing equal housing statement
Character limits	Fits the target channel without truncation	MLS remark field cut mid-disclosure
Personal details	Correct names, pronouns if used, correct pronouns for pronouns used, correct contacts	Mixed up client names between clients
Links and CTAs	Tracking links resolve, booking links are current	Expired listing link in a nurture sequence
Tone and accuracy of urgency	Claims like "last chance" or "price dropping tomorrow" are true	Invented scarcity on a stale listing

A note on what this pack is not

This is a marketing and communication toolkit, not legal advice and not a substitute for your brokerage's compliance program. When in doubt, send the output to your supervising broker or compliance officer before publishing. Losing a day to a review is cheaper than losing a client, a license, or a lawsuit.

How to use this pack

The five-step routine

Step	What you do	Time it takes
1. Pick the workflow	Find the category heading that matches the job in front of you — listing copy, buyer nurture, objection handling, closing	30 seconds
2. Fill in the placeholders	Replace every `{{placeholder}}` with real, verified detail from your records	2–3 minutes
3. Paste and generate	Paste the prompt into your AI assistant of choice, with your own context or notes appended	30 seconds
4. Verify against the source	Check every factual claim against the listing sheet, disclosure documents, and CRM record. Fix or cut what you cannot source	2–3 minutes
5. Adapt to your voice and market	Adjust tone, local terminology, greeting, and call-to-action. Read it out loud once before it sends	1 minute

Budget five minutes per asset. The AI does the drafting; you do the verifying, the editing, and the sending. That division is what keeps the output both fast and safe.

Placeholder conventions used throughout

Every prompt uses double-brace placeholders. Replace **all** of them. If a field does not apply, delete the entire clause rather than leaving a bracket in your published copy.

Placeholder	What goes in it	Typical source
`{{agent_name}}`, `{{agent_phone}}`, `{{agent_email}}`	Your contact block	Your signature
`{{brokerage_name}}`, `{{team_name}}`	Business and team name, exactly as licensed	Your license card
`{{city}}`, `{{neighborhood}}`, `{{state_or_province}}`	Plain geographic references only	Listing
`{{property_address}}`, `{{property_city}}`	Full listing address	MLS record
`{{list_price}}`, `{{price_per_sqft}}`	Verified figures	MLS record
`{{beds}}`, `{{baths}}`, `{{sqft}}`, `{{lot_size}}`, `{{year_built}}`	Verified specs	MLS record / appraisal
`{{hoa_fee}}`, `{{hoa_inclusions}}`, `{{property_taxes}}`	Verified recurring figures	HOA docs / tax record
`{{features}}`	Only features confirmed by the seller or MLS	MLS remarks / disclosure
`{{open_house_date}}`, `{{open_house_time}}`	Scheduled dates	Your calendar
`{{days_on_market}}`	Current DOM as of the send date	MLS

Placeholder	What goes in it	Typical source
`{{lead_name}}`, `{{lead_email}}`, `{{lead_phone}}`	Contact details from the CRM	CRM
`{{lead_source}}`	Where the lead came from	CRM
`{{budget_range}}`, `{{timeline}}`, `{{preapproval_status}}`, `{{loan_type}}`, `{{down_payment_pct}}`	Buyer qualification details	Lender / conversation
`{{seller_name}}`, `{{buyer_name}}`	Client names	Engagement letter
`{{offer_price}}`, `{{appraisal_value}}`, `{{inspection_issue}}`	Transaction figures	Offer / inspection report
`{{local_rules}}`	Jurisdictional advertising and disclosure requirements	Your compliance team
`{{cta_url}}`, `{{calendar_link}}`, `{{listing_link}}`	Live links for the campaign	Your CRM / website

Five habits that make the output usable

1. **Give the AI your voice.** Paste three of your own past emails or posts before the prompt: *"Here are three examples of how I write. Match this voice."* Generic output drops away fast.
2. **One asset per generation.** Do not ask for a 5-email sequence and 12 social posts in one pass. Separate generations produce sharper, more usable copy.
3. **Ask for options, not a single answer.** Add "Give me 3 options with different tones" and pick deliberately. You will edit anyway; starting from three options is faster.
4. **Keep the AI honest.** If a prompt needs a fact you do not have, tell the model to write around it with a clearly marked placeholder like `[VERIFY: kitchen remodel date]` rather than inventing it. Delete the bracketed items before publishing.
5. **Save what works.** When an output lands, drop the prompt and the result into your Notion page for that workflow. Within a month you will have your own house style — and a much faster next listing.

What "good" looks like, in one line

Good copy is specific, verifiable, written in the client's language, and ends in exactly one clear next step. If a draft is vague ("breathtaking home in a great neighborhood"), long, or ends without a request, it is not ready to send.

The 12 Ready-to-Use Artifact Templates

These are the finished structures. Each one shows the exact sections, columns and cadence you need — copy them into Notion, fill the placeholders, and send.

Template 1 — New Listing Email Sequence (5 Touches)

Use when: a listing goes live. Sends to your buyer database and sphere of influence.
Cadence: Day 0 (launch), Day 3 (feature focus), Day 7 (open house), Day 14 (value/positioning), Day 30 (last-call / showing push).

#	Touch	Send	Subject line	Core message	Single CTA
1	Launch announcement	Day 0	`New on the market: {{beds}} bed, {{baths}} bath at {{property_address}}`	Verified facts, strongest feature, one lifestyle detail	Book a showing
2	Feature spotlight	Day 3	`The {{feature_headline}} at {{property_address}}`	One feature, explained as a use-case	See the full gallery
3	Open house invite	Day 7	`Open house {{open_house_date}} – {{property_address}}`	Date, time, what to expect, what to wear/ bring	RSVP for the open house
4	Positioning / value	Day 14	`Why buyers are noticing {{property_address}}`	Comparison framing using verified data only	Request a private tour
5	Last-call push	Day 30	`Still available: {{property_address}}`	Current status, feedback received, urgency that is true	Book a showing this week

Touch 1 body skeleton:

> Hi {{first_name}},
>
> I just photographed a home that came up in {{neighborhood}} that I think is worth your attention.
>
> {{property_address}} — {{beds}} bed, {{baths}} bath, {{sqft}} sq ft, built in {{year_built}}.
>
> {{one_verified_hook}}
> {{one_lifestyle_detail}}
>
> Here are the full details and photos: {{listing_link}}
>
> Are you free to see it this week? I can hold Tuesday at {{primary_time}} or Wednesday at {{alternate_time}}.
>
> {{agent_name}}
> {{agent_phone}}

How to use: Paste the skeleton into your email template and let the AI in this pack fill each touch from verified listing data. Send Touch 1 to the whole list, Touches 2–5 to anyone who opened or clicked; stop the sequence immediately on any reply, showing request, or "remove me" signal.
What good looks like: Every factual claim traces to the MLS record or seller disclosure. Exactly one CTA per email. Under 130 words for Touch 1.

Template 2 — Buyer Nurture Email Sequence (7 Touches)

Use when: a new (not yet qualified) buyer lead enters your CRM. Segments by new vs pre-approved vs first-time buyer.
Cadence: Day 0, Day 2, Day 5, Day 9, Day 14, Day 21, Day 30.

#	Touch	Send	Segment	Purpose	CTA
1	Welcome + 1 clear question	Day 0	All	Establish rapport, capture the search criteria	Reply with your must-haves

#	Touch	Send	Segment	Purpose	CTA
2	Market snapshot	Day 2	All	Prove you are tracking the market	Tell me what you're saving for
3	Matched listing	Day 5	All	Deliver a curated match	Book a showing
4	Financing path	Day 9	New + first-time	Reduce the "can I afford it" fear	Get a lender intro
5	Pre-approval nudge	Day 9	Pre-approved	Convert to a serious buyer	Send pre-approval letter
6	Neighborhood guide	Day 14	All	Build value while staying factual	Pick your 2–3 areas
7	Recap + check-in	Day 30	All	Re-engage, reset cadence	Book a strategy call

Touch 1 body skeleton:

> Hi {{lead_name}},
>
> Thanks for reaching out about {{buyer_interest_area}}. I help buyers in {{city}} — I want to make sure I send you things that actually fit, not a flood of listings.
>
> Three quick questions:
> 1. Which areas are you open to? {{area_options}}
> 2. What's your realistic monthly payment range? {{budget_range}}
> 3. What's your ideal timeline — next 3 months, 3–6 months, or just starting to look?
>
> Just reply with the answers in any order. I'll take it from there.
>
> {{agent_name}} · {{agent_phone}}

How to use: Run three variants from the same skeleton — one for brand-new leads, one for pre-approved buyers (skip Touch 4, add Touch 5), one for first-time buyers (add a plain-language financing explainer to Touch 4). Send from a personal address, one reply at a time.
What good looks like: Touch 1 asks three questions, not ten. The sequence never sends more than two touches without a human touchpoint. The final touch offers a call rather than another listing.

Template 3 — Seller Nurture Sequence (6 Touches)

Use when: a listing is live and you need to report, coach, and keep the seller engaged.
Cadence: Day 0, Day 3, Day 7, Day 14, Day 30, Day 45.

#	Touch	Send	Subject	Content focus	CTA
1	Launch confirmation	Day 0	`{{property_address}} is live`	Confirm live status, portals, photo quality, pricing position	Confirm the details are right
2	First-week activity report	Day 3	`Week one: {{property_address}}`	Real numbers only — views, saves, inquiries	Share feedback
3	Showing recap	Day 7	`What buyers said about {{property_address}}`	Anonymized buyer reactions, patterns, no names	Approve a pricing adjustment

#	Touch	Send	Subject	Content focus	CTA
4	Market reality check	Day 14	`Your 14-day numbers for {{property_address}}`	Showings vs inquiries vs days on market vs comps	Book a pricing review
5	Value of patience	Day 30	`What I'd do at 30 days on {{property_address}}`	Options: hold, adjust, or re-market	Book a review call
6	Decision point	Day 45	`Decision time for {{property_address}}`	Present the three paths with evidence	Choose a path

Touch 3 body skeleton:

> Hi {{seller_name}},
>
> Here's what came out of the first week on {{property_address}}:
>
> **Showings:** {{showing_count}}
> **Online views:** {{view_count}} | **Saves:** {{save_count}}
> **Inquiries:** {{inquiry_count}}
>
> The feedback I heard most often:
> - {{feedback_theme_1}}
> - {{feedback_theme_2}}
>
> One thing buyers keep mentioning is {{common_objection}}. I'd like to address that before the next wave of traffic arrives — I can prepare {{specific_action}}.
>
> Are you open to a quick call Thursday or Friday to go over the numbers together?
>
> {{agent_name}}

How to use: Use the report prompts (see "Seller Nurture & Communication") to generate the numbers block, then paste it into this skeleton. Never fabricate activity numbers — if the platform has not loaded yet, say so.
What good looks like: Every number is real, sourced and dated. The seller leaves each email with a decision or a scheduled call, never just information.

Template 4 — Open House Invitation Sequence

Use when: you have an open house date and a list of prospects worth inviting personally.
Cadence: Day −10 (save the date), Day −5 (invite), Day −2 (reminder), Day 0 (morning of), Day +1 (thank you / follow-up).

#	Touch	Send	Channel	Message	CTA
1	Save the date	Day −10	Email	Date, time, address, one-line reason it is worth their trip	RSVP yes / no
2	Personal invitation	Day −5	Email or text	Addressed by name, mentions what they said they wanted	I'll be there
3	Logistics reminder	Day −2	Text	Time, address, what to expect, 5-second CTA	Reply RSVP
4	Morning-of	Day 0, 9:00am	Text	"Doors open at {{time}}"	See you there

#	Touch	Send	Channel	Message	CTA
5	Thank you + next step	Day +1	Email	Feedback + one relevant match	Book a showing

Touch 2 body skeleton:

> Hi {{first_name}},
>
> You mentioned you're looking for {{specific_need_from_conversation}} — I have one coming up that fits.
>
> **{{property_address}}**
> {{open_house_date}} · {{open_house_start_time}} – {{open_house_end_time}}
>
> {{one_verified_feature_that_matches_their_need}}
>
> No pressure and no hard sell — I'll give you the full rundown of what works and what doesn't so you can decide if it's worth a second look.
>
> Can you let me know if you'll be there?
>
> {{agent_name}} · {{agent_phone}}

How to use: Personalize Touch 2 for every recipient; a copied invitation to ten people is the single most common reason open houses underperform. Suppress anyone who attended a previous event or explicitly opted out.
What good looks like: The invitation names something the recipient actually said they wanted. RSVP tracking exists — you know who is coming before the doors open.

Template 5 — Past-Client Referral Ask

Use when: a transaction closes, and then periodically with past clients who had a good experience.
Cadence: Closing-week thank-you, Day 45, Day 90, then annually on the anniversary of their closing.

#	Touch	Send	Channel	Ask	Permission step
1	Closing thank-you	Closing week	Handwritten card or email	None — thanks only	None
2	How did we do?	Day 30	Email or text	1-minute satisfaction survey	"Is now a good time?"
3	Referral ask	Day 45	Email or text	"Do you know anyone who is thinking of selling?"	Offer a private referral option
4	Specific review ask	Day 90	Email	Review request for the platform	Offer a review link directly
5	Anniversary check-in	Closing anniversary	Text or card	Annual home-value update + light referral ask	Ask how the year went

Touch 3 body skeleton:

> Hi {{past_client_first_name}},
>
> It has been a few weeks since you closed on {{property_address}} — I hope the move has gone well.

> I have a simple question, and "no" is a perfectly good answer: **do you know anyone who is thinking of selling in the next 6–12 months?**
>
> If it is not someone you would want to work with, that is completely fine. I am only asking because you are easy to reach and I do a good job with the people I work with.
>
> If someone comes to mind, I will take care of the first conversation — no awkward intros required. You would simply give them my name and number.
>
> Would you be comfortable with that?
>
> {{agent_name}} · {{agent_phone}}

How to use: Send Touch 3 only to clients whose file was genuinely smooth and who received good communication. Ask for one referral, not "anyone you know." Never offer a gift that your brokerage's rules or the referral partner's rules prohibit.
What good looks like: The ask is low-pressure and specific, gives the client an easy out, and doesn't make them vouched for.

Template 6 — Call Script: Listing Appointment

Use when: you have a seller lead and want to book the in-person listing consultation.
Cadence: single call, 12–20 minutes.

Section	Purpose	Say (adapt to your voice)
1. Opening	Name, permission, reason for the call	"Hi {{seller_first_name}}, this is {{agent_name}} with {{brokerage_name}}. Do you have 15 minutes? I don't want to catch you mid-task."
2. Context	What you already know, so they don't repeat it	"When we spoke on {{date}}, you mentioned you're deciding whether to sell now or wait — has anything changed since then?"
3. Timeline	Establish urgency without pressuring	"What would make this decision urgent for you — a move, a life change, a deadline?"
4. Outcome	Define what a good result looks like	"If we did this, what would you want the sale to accomplish?"
5. Numbers	Surface the price conversation early	"Have you had a sense of what comparable homes nearby have been doing, or would you like me to bring that back to you?"
6. Objection check	Surface the real hesitation	"What would make you feel this was the wrong call to make?"
7. Pricing conversation	Explain method, not a number yet	"I price by comparing recent sales, current competition and how long the market takes to absorb a home like yours. I'd want to walk you through the specifics before giving you a number."
8. Logistics	Practical details	"What would need to happen in your home before photos? What's your ideal timeline for being out?"
9. Close	Set the next step explicitly	"Based on what you've told me, let me put together the pricing and a launch plan for {{property_address}}. Can I email it to you by {{date}}? And can we meet Tuesday at {{time}} to walk through the house?"
10. Confirm	Lock it down in writing	Send a same-day email confirming what you agreed and what happens next.

How to use: Run this script as a live-call prep doc, not a script to read. Cover sections 2, 3, 4 and 7 from the prep prompt first so you can spend the call on their answers instead of your questions.
What good looks like: You leave the call with a confirmed appointment date, a confirmed email follow-up, and a clear picture of the seller's motivation and timeline.

Template 7 — Call Script: Price Objection

Use when: a seller reacts badly to your recommended list price.
Cadence: live call, 20–30 minutes, always followed by a written summary.

Step	Purpose	Say (adapt)
1. Pause	Let the emotion surface	"I can hear this isn't what you expected. Tell me more."
2. Reflect	Prove you heard them	"You're concerned that {{list_price}} is above what the market will actually pay."
3. Diagnose	Find the real anchor	"What number were you thinking of, and where did that come from?"
4. Evidence	Present the data	"Here's what I based it on: {{comparable_1}}, {{comparable_2}}, {{comparable_3}} — each one within {{radius}} and within {{date_window}}."
5. Strategy	Explain the plan, not just the number	"If we list at {{original_price}} and it goes quiet, we adjust in steps and end up advertising a lower number publicly. If we list at {{recommended_price}}, we protect the price while we test the market."
6. Consequence	Make the cost concrete	"Every week we sit at a price that's too high costs us {{market_context}} and pushes us into the next tier of buyers."
7. Options	Give real choices	"Option A: list at {{recommended_price}}. Option B: list at {{higher_price}} for {{number_of_days}} days and then adjust. Which one do you want?"
8. Confirm	Write it down	"Let me put both options in an email with the comparable sales so you have the numbers in front of you."

How to use: Prepare the comparable sales with the valuation prompts in this pack before the call. Never argue with a seller's number — diagnose where the anchor came from, then let the data speak.
What good looks like: The seller makes the decision with a strategy attached, and the follow-up email includes the comps so the reasoning survives after the call ends.

Template 8 — Social Post Set for a New Listing

Use when: a listing goes live and you need a week's worth of organic content.
Cadence: 5 posts over 7 days, each platform-native, each with one link and one CTA.

#	Day	Platform	Format	Hook	Body focus	CTA
1	Day 1	Instagram	Carousel	"3 things you notice the second you walk in"	Feature walk-through, slide by slide	Comment "INFO" for details
2	Day 2	Facebook	Photo + text	The hero shot, no jargon	Specs, verified, one lifestyle detail	Message me for the full gallery

#	Day	Platform	Format	Hook	Body focus	CTA
3	Day 3	Instagram Reel / TikTok	20–30s walkthrough	"POV: you finally see the {{feature_name}}"	Room-by-room motion, no voice needed or 10s voiceover	Link in bio
4	Day 4	LinkedIn	Text + single image	"What this listing taught me about {{neighborhood}} pricing"	Market insight, agent credibility	Comment with questions
5	Day 6	Instagram	Story set (5 frames)	Countdown to the open house	Behind-the-scenes, logistics, CTA card	RSVP link
6	Day 7	Email + social	All channels	Open house day	Date, time, what to expect	RSVP

Post 2 skeleton (Facebook):

> **New listing — {{property_address}}, {{city}}**
>
> {{beds}} bed · {{baths}} bath · {{sqft}} sq ft · Built {{year_built}}
>
> {{one_verified_hook}}
> {{one_lifestyle_detail}}
>
> {{price}} · {{hoa_fee}} HOA
>
> Full photos and the floor plan: {{listing_link}}
>
> Want to see it in person? Message me and I'll get you in this week.

How to use: Generate each post separately with the social prompts in this pack, then check each one against that platform's character limit. Never use "just listed!" as the only hook and never describe the neighborhood with fair-housing-sensitive language.
What good looks like: Every post is written for that platform, not copied across all of them. One CTA each. A real photo of the actual property — never a stock image of a different home.

Template 9 — Instagram Carousel Outline for a Property Feature

Use when: you want to explain one feature properly rather than list it.
Cadence: one carousel per feature, posted 2–3 times per week during a listing's active period.

Slide	Type	Headline	Body	Visual direction	Alt text
1	Cover	The hook feature	One line: what makes this feature worth a swipe	Hero photo, tight crop, no text overlay	"Bright kitchen with quartz counters and island"
2	Context	Why it matters	2–3 sentences on the real-life use	Wide photo of the space	Descriptive
3	Detail	The specifics	Verified numbers: dimensions, materials, year	Detail shot	Descriptive
4	Proof	Verified evidence	"Per the seller's disclosure" / "Per the listing sheet"	Document detail or listing photo	Descriptive
5	Detail 2	Second element of the feature	2–3 sentences	Second photo	Descriptive

Slide	Type	Headline	Body	Visual direction	Alt text
6	Objection	"But what about…"	Answer the most common buyer worry on this feature	Photo	Descriptive
7	Benefit	The payoff	Tie back to how life works in the space	Lifestyle photo	Descriptive
8	CTA	Your turn	"Comment 'DETAILS' or DM me for the full list"	Clean branded card	"Contact {{agent_name}} for details"

Caption skeleton:

> {{feature_name}} at {{property_address}} — here's the detail most people miss:
>
> {{verified_detail}}
> {{verified_detail_2}}
>
> {{one_lifestyle_detail}}
>
> Want the full list of features and photos? Comment {{keyword}} and I'll send it over.
>
> # RealEstate #{{city}}RealEstate #HomeSearch #{{feature_hashtag}}

How to use: Verify every claim in slides 3 and 4 before publishing. Include alt text on every slide — it is both an accessibility requirement on most platforms and good practice.
What good looks like: Slide 4 exists and cites a source. Slide 6 handles a real objection instead of hype. The caption asks for a keyword so the platform reports genuine interest.

Template 10 — SMS/WhatsApp Follow-Up Flow

Use when: a lead needs fast, low-friction follow-up. Assumes prior opt-in for commercial messaging.
Cadence: Trigger-based, not calendar-based — see the flow below.

Step	Trigger	Channel	Message	Branch on reply
1	New lead form submitted	SMS	"Hi {{lead_first_name}}, this is {{agent_name}} with {{brokerage_name}}. I got your note about {{property_interest}}. Is now a good time for 2 minutes, or should I text you a couple of listings?"	"Now" → call in 5 min; "Send listings" → send 3 curated + wait 24h; no reply → Step 2
2	No reply after 30 min	SMS	"Here's one that came up in {{neighborhood}}: {{property_address}}, {{beds}} bed, {{baths}} bath, {{list_price}}. Want the photos?"	"Yes" → send gallery; "Not quite" → ask 1 qualifying question
3	No reply after 24h	SMS	"Quick one — are you still looking in {{area}}, or has that changed?"	Reply → requalify; no reply → Step 4
4	No reply after 72h	SMS	"Should I stop texting you about {{area}} homes? Reply STOP to opt out and I'll remove you."	Opt-out → suppress immediately; reply → keep going

Step	Trigger	Channel	Message	Branch on reply
5	Showing scheduled	SMS	"You're set for {{property_address}} at {{date_time}}. I'll text you when I'm on the way. Reply CANCEL to reschedule."	Cancel → reschedule within 24h
6	After showing	SMS	"Thanks for viewing {{property_address}}. What's your honest reaction — go, no-go, or not sure yet?"	"Go" → move to offer strategy; "No" → ask what was missing; "Not sure" → send 2 more matches
7	Offer submitted	SMS	"Your offer on {{property_address}} was submitted at {{offer_time}}. I'll update you as soon as I hear back."	Any reply → personal call, not more texts

How to use: Load each message as a template with the placeholders mapped to your CRM fields. Never send this sequence to anyone without opt-in. Include your name and brokerage in the first message; honor STOP instantly and permanently.
What good looks like: Every message stands alone and under 320 characters, ends with one question, and the branching table is written down before you go live so no lead gets trapped in a loop.

Template 11 — Valuation Conversation Guide

Use when: a seller wants to know what their home is worth before deciding to list.
Cadence: one 30–45 minute conversation, followed by a written CMA summary within 24 hours.

Step	Purpose	Agent says	Client hears
1. Frame	Set expectations, remove pressure	"This isn't an appraisal and I won't give you a number in the first five minutes. First I'll tell you how I price, then we'll look at what the evidence says."	A process, not a sales pitch
2. Context	Understand the property	"Tell me about the home — updates, what you've changed, what you'd want to change."	Their knowledge is valued
3. Method	Explain your pricing approach	"I look at recent sales nearby, at what's competing with you right now, and at how fast homes like yours are selling. Those three things give me a range, not a single number."	Logic behind the price
4. Evidence	Present the comparable sales	"Here are {{number_of_comps}} sales I want to show you: {{comparable_1}}, {{comparable_2}}, {{comparable_3}}."	Real transactions, verifiable
5. Adjustments	Show your reasoning	"This one sold {{price}} but it had {{feature_difference}} and it was {{days_on_market}} days on market — here's how that adjusts my thinking."	Why your home is not the same as the comp
6. Range	Give a defensible range	"Based on that, I'd list between {{low_price}} and {{high_price}} depending on how aggressively we want to move."	Range and strategy, not a false precision
7. Strategy	Connect price to the goal	"If you want to move quickly, we come in at {{aggressive_price}}. If you'd rather wait for the right buyer, we come in at {{conservative_price}} and we wait."	Price is a decision tool
8. Risks	Be honest	"The risk at the lower end is {{risk}}. The risk at the upper end is {{risk_2}}."	Trust through candor
9. Next step	Close	"Do you want a listing agreement, or would you like me to send the written comparison and check back in {{timeframe}}?"	A no-pressure next step

How to use: Run the "explain my valuation method" prompt before the conversation so you can speak to your process without thinking. Bring the comps on screen or on paper.
What good looks like: The seller understands the method well enough to explain it to a spouse, and the conversation ends with either a listing agreement or a scheduled check-in — never a vague "I'll get back to you."

Template 12 — Review Request Message

Use when: a transaction closes and the client was satisfied. Note: some states, platforms and brokerages have specific rules about who may ask for a review and what you may say — check `{{local_rules}}` before sending.
Cadence: Day 7 after closing (thank-you), Day 14 (review ask), Day 45 (one gentle reminder), then stop.

#	Touch	Send	Channel	Message	Link handling
1	Thank you	Day 7	Email	Thanks + handover details + "how can I help in your first weeks"	No link
2	Review ask	Day 14	Email	Personal note + the ask + direct link	Direct link to your profile, no third-party redirect
3	SMS nudge	Day 30	SMS	"Hi {{client_first_name}}, one small favor — if you're willing, a review helps other buyers in {{city}}. Here's my page: {{review_link}}"	Direct link, plain text
4	Close the loop	Day 45	Email	"Closing out my ask — no pressure either way. Here's my contact info for the future."	No link pressure

Touch 2 body skeleton:

> Hi {{client_first_name}},
>
> It's been a couple of weeks since you got the keys to {{property_address}} — I hope you're settling in well.
>
> I wanted to ask you for one small favor. If our experience worked for you, would you leave a short review? It genuinely helps other buyers and sellers know what to expect when they hire an agent.
>
> If you have a few minutes: {{review_link}}
>
> And if something didn't go the way you expected, I'd rather hear it directly from you — you can just reply to this email and I'll make it right.
>
> Thanks again for trusting me with your move.
>
> {{agent_name}} · {{agent_phone}} · {{brokerage_name}}

How to use: Never tie or trade any benefit, service, gift, or upgrade on a review, positive or negative — that is prohibited in many jurisdictions and is bad practice everywhere. Send only to clients whose experience was genuinely good.
What good looks like: The ask is one sentence, the link is direct, and there is an explicit invitation to raise a problem directly. No incentives, no pressure, no guilt.

Listing Copy & Descriptions

#	Prompt	Use it when	Output
1.1	Location-Led MLS Description	The listing goes live and the remarks field is blank	3 paragraphs, 180–250 words
1.2	Headline, Subhead, and Hook Set	You need portal, flyer, and social copy from one source	7 copy blocks with character caps
1.3	Feature-to-Benefit Translation Table	Features are listed but nobody can picture the life in them	Table plus a 60-word feature paragraph
1.4	Just-Listed Launch Email	The listing is live and your buyer list needs to hear it today	One email under 150 words
1.5	Pricing-Context Note	Buyers passed on the price and you need to reframe it	Buyer-facing note + agent talking points
1.6	Buyer FAQ Sheet	Your team answers the same questions on every showing	10-question verified Q&A table
1.7	Photo Caption Set and Carousel	The photos are shot but the captions are generic	8 captions + 7-slide carousel
1.8	Coming-Soon Teaser	You need pre-market momentum before the launch date	4 teaser assets + launch-day sequence

1.1 — Location-Led MLS Description

```
You are a listing copywriter for {{brokerage_name}}. Write the public remarks for a MLS listing in
{{city}}.

Verified property data:
- Address: {{property_address}}
- Price: {{list_price}}
- Size: {{beds}} bd · {{baths}} ba · {{sqft}} sq ft
- Built: {{year_built}} · Lot: {{lot_size}}
- Features (verified only): {{property_features}}
- Target buyer: {{target_buyer}}
- Location facts (distance to named landmarks, transit times, street context, year the home was
built, lot orientation, parking): {{location_facts}}

Write exactly 3 paragraphs, 180–250 words total.

Paragraph 1 — Open with ONE specific sentence about where the property sits, drawn only from
{{location_facts}}. Example shape: "Two blocks from the {{landmark_name}} entrance and a
{{walk_time}} walk to {{transit_station}}." Do NOT open with finishes, appliances, or a generic
welcome. Never use fair-housing-sensitive language: no "safe," "good schools," "family-friendly,"
"quiet," "ideal for families," or any claim about who the area suits. Describe verifiable
attributes only.

Paragraph 2 — Walk the layout and translate the verified features into use: name at least three
from {{property_features}} and say what each one lets a buyer do. Do not introduce any feature,
dimension, system, renovation, appliance, or utility that is not in the data above.

Paragraph 3 — One sentence naming who the home was designed for (from {{target_buyer}}), and one
sentence describing the next step for an interested buyer.

Rules: no "stunning," "breathtaking," "must-see," "nestled," "pristine," "best value," or "priced
to sell." No comparative claims. If a fact you want is missing, write [VERIFY: what you need] in
brackets instead of inventing it. Output only the three paragraphs.
```

How to use: Paste verified data only — pull `{{property_features}}` from the MLS remarks plus the seller disclosure, and `{{location_facts}}` from your own notes, never from the model's memory of the property. Read every sentence against the listing sheet and delete anything you cannot source.
What good looks like: Paragraph 1 is about location and would still make sense if you cut all the finishes; paragraph 2 names three real features in use-case language; zero steering words; 180–250 words; no `[VERIFY]` brackets survive your edit.

1.2 — Headline, Subhead, and Hook Set for Portals and Flyers

```
You are writing the short-form copy that appears in listing portals, on a printed flyer, and on
social for the listing at {{property_address}}.

Input:
- Verified features: {{property_features}}
- Target buyer: {{target_buyer}}
- Location facts: {{location_facts}}
- Price and specs: {{list_price}} · {{beds}} bd · {{baths}} ba · {{sqft}} sq ft
- Primary photo: {{hero_photo_description}}

Write these blocks, each on its own line, with the character count in brackets after it:

1. PORTAL HEADLINE — max 50 characters including spaces. Name the one thing that makes this home
distinct (a location fact or a genuine feature). No adjectives stacked together.
2. PORTAL SUBHEAD — max 70 characters. Add the second most important fact and the specs.
3. SOCIAL HOOK — max 120 characters. Written for a buyer scrolling on a phone: one concrete fact,
no hype words.
4. FLYER TOP THIRD — 3 lines, max 25 words total. Line 1: the address and city. Line 2: the one
distinguishing fact. Line 3: price and bed/bath/sqft.
5. HERO PHOTO CAPTION — one sentence, max 25 words, describing only what the camera actually shows.
6. THREE ALTERNATE HEADLINES — 50 characters max each, angled differently: [feature-led],
[location-led], [lifestyle-led].

Rules: every factual claim must trace to the input. Never write "stunning," "breathtaking," "must-
see," "pristine," "luxurious," "safe," or "family-friendly." No claim about schools, safety, or
neighborhood character. If you need a fact you do not have, output [VERIFY: ...] instead of a
guess.
```

How to use: Paste the resulting blocks straight into your MLS template fields and check each character count in the actual field before publishing — some portals count differently and will truncate mid-disclosure.
What good looks like: Every block passes its cap with room to spare; the three alternate headlines make three visibly different arguments; each block contains one specific fact a buyer could verify; nothing in the set reads like it could describe any other listing.

1.3 — Feature-to-Benefit Translation Table

```
You are helping an agent explain a house to buyers who keep nodding politely and never telling you what they think.

Verified features: {{property_features}}
Target buyer: {{target_buyer}}
Known buyer questions from showings: {{buyer_objections}}

Output two things:

A. A markdown table with these columns:
| Verified feature | What it actually is (plain language) | How a buyer uses it | Who notices it first | The objection it answers |
Populate one row per feature. "How a buyer uses it" must describe a real moment in a real day, not an abstraction. "Who notices it first" must be a specific person type drawn from {{target_buyer}} (for example: "the buyer who works from home three days a week"). Only use features from the list above — add nothing.

B. A 60-word feature paragraph that leads with the three strongest rows, written in the voice {{agent_voice}} and free of superlatives.

Rules: no invented dimensions, materials, or systems. If a feature would obviously answer an objection in {{buyer_objections}} but the feature is not verified, list it under a final section titled "Not verified — worth checking" instead of the table.
```

How to use: Use this table to prep every showing, to answer the "what would you change about the house" question, and as the source material for the feature paragraph in your marketing.
What good looks like: At least six rows; the "how a buyer uses it" column contains scenarios, not adjectives; the table lines up with the actual objections buyers have raised; the 60-word paragraph could be read aloud to a buyer without sounding like marketing.

1.4 — Just-Listed Launch Email to Your Buyer Database

```
You are writing the launch email I send to my buyer database the day a listing goes live. Write one email, under 130 words in the body.

Input:
- Address and city: {{property_address}}, {{city}}
- Price and specs: {{list_price}} · {{beds}} bd · {{baths}} ba · {{sqft}} sq ft
- The one fact that makes it worth their attention: {{one_verified_hook}}
- A verified location fact: {{location_fact}}
- Photos and full details: {{listing_link}}
- Two times I can show it: {{showing_slot_1}} and {{showing_slot_2}}

Requirements:
- Subject line: 6 words or fewer, containing the city or neighborhood and the bed count. No "Just listed!" and no emoji.
- Body structure: one sentence on why THIS buyer should care (use the location fact and the hook), a 3-line spec block, the link, one sentence on what happens at a showing, and a single closing question offering the two times.
- Write to {{buyer_segment}} in their language: {{target_buyer}}.
- No fair-housing characterizations of the area, no school or safety claims, no urgency that is not true.

Output the subject line, then the body.
```

How to use: Send on launch day to the segment that matches `{{buyer_segment}}` only, and stagger to other segments only if the first does not respond. Personalize the first line to a prior conversation whenever you have one.

What good looks like: Under 130 words, one question at the end, no superlatives, and a reader who has never met you can tell in one sentence why this particular house fits their search.

1.5 — Pricing-Context Note for Buyers Who Passed on the Price

```
A buyer saw {{property_address}} at {{list_price}}, told me it was "too much," and walked. I need
to reopen the conversation without pressuring them and without making a claim I cannot support.

Input:
- List price and specs: {{list_price}} · {{beds}} bd · {{baths}} ba · {{sqft}} sq ft
- Verified features: {{property_features}}
- Verified location facts: {{location_facts}}
- Recent nearby sales I have confirmed: {{comparable_sales}}
- Monthly carrying costs the buyer has told me about: {{buyer_monthly_budget}}
- What the buyer said about the price: {{buyer_objection_language}}
- Current status and days on market: {{listing_status}} · {{days_on_market}}

Write two things:

1. A buyer-facing note (email or text, under 140 words) that responds to
{{buyer_objection_language}} directly. It must: acknowledge their concern in their own words, give
one or two concrete verified reasons the price may not match what they assumed, present the most
relevant comparable in plain language, and end with one specific question asking what their actual
ceiling looks like.

2. Three internal talking points for my next call: what they likely mis-assumed, what evidence
would change their mind, and the one question I should ask to find out whether price is really the
blocker.

Rules: no pressure tactics, no invented urgency, no "someone else is interested" unless that is
literally true and you can name the date, no claims about resale value or appreciation, no
guarantees. If a comparable or figure is missing, write [VERIFY: ...].
```

How to use: Send the note only to buyers who actually engaged with the property, and only after you have the comparable data in front of you. Update the note if the price changes — a stale price note is worse than no note.
What good looks like: The note quotes the buyer's own objection back; every number is one you can pull up on the MLS; it asks for their ceiling instead of defending the number; it contains no scarcity language that isn't true today.

1.6 — Buyer FAQ Sheet for a Listing

```
Build the question-and-answer sheet our team uses at showings of {{property_address}}.

Verified data:
- Specs and price: {{beds}} bd · {{baths}} ba · {{sqft}} sq ft · {{year_built}} · {{list_price}}
- Verified features: {{property_features}}
- Recurring figures (HOA, taxes, utilities, insurance estimate if I have it): {{recurring_costs}}
- Location facts: {{location_facts}}
- What the seller disclosed: {{seller_disclosures}}
- Items I genuinely do not know: {{unknown_items}}

Write 10 questions in the voice a buyer actually asks, followed by a short answer (2–4 sentences
each). Cover the categories I flagged plus these categories if they have not come up: monthly
carrying costs, what is included in the HOA, parking, storage, laundry, utilities for the buyer,
pets, rental restrictions, tax implications of the sale, and the timeline from offer to keys.

Rules: answer only from the verified data. If the answer is in {{unknown_items}} or requires a
professional, write: "I'll confirm this and email you the answer by {{date}}" — never guess. No
tax, legal, lending, or inspection conclusions. Keep the language plain enough for a first-time
buyer.
```

How to use: Print this for whoever staffs the open house, paste it into your CRM as a showing follow-up attachment, and turn each "I'll confirm this" line into a task with a deadline before the next showing.
What good looks like: Ten questions that sound like buyer speech rather than a disclosure form; every answer traces to the data block; unknown items are flagged honestly with a promise and a date; a first-time buyer could read it and make a decision.

1.7 — Photo Caption Set and Carousel for the Listing Gallery

```
You are writing the captions for the photo gallery of {{property_address}} and one Instagram
carousel to go with it.

Input:
- Photo list with what each photo actually shows: {{photo_inventory}}
- Verified features: {{property_features}}
- Target buyer: {{target_buyer}}
- Verified location facts: {{location_facts}}
- Brand tone: {{agent_voice}}

A. Write a caption for each photo in {{photo_inventory}}, in order. One or two sentences each, max
30 words. Describe only what is visible plus one verified fact you can attach to it. No "stunning,"
"picture-perfect," "soaking in natural light" unless the light direction is documented, no claims
about the view unless the view is verified and photographed.

B. Write one 7-slide carousel:
- Slide 1 cover: 4–7 words that make a buyer want to swipe
- Slides 2–6: one idea per slide — a feature, a space, or a location fact — each with a 1–2 line
body
- Slide 7: one call to action
Also write the post caption (max 150 words) and a 5–8 tag set, plus alt text for each slide that a
person could read aloud.

Rules: no fair-housing characterizations, no school or safety claims, no invented views, no
invented renovations. Use [VERIFY: ...] for anything you cannot source from {{photo_inventory}} or
{{property_features}}.
```

How to use: Paste the finished captions into your MLS photo fields and your listing page, then check each caption against the photo itself before publishing — a caption that describes the wrong room destroys trust faster than no caption.
What good looks like: Every caption names something a buyer can see in the frame; the carousel has one idea per slide and no slide is purely hype; alt text is descriptive and complete; no two captions could be swapped between two different listings without someone noticing.

1.8 — Coming-Soon Teaser and Launch Sequence

```
The listing at {{property_address}} is not live yet. I want to build a short pre-market runway without claiming anything I cannot prove.

Input:
- Address, city, specs: {{property_address}}, {{city}} · {{beds}} bd · {{baths}} ba · {{sqft}} sq ft
- Verified features: {{property_features}}
- Verified location facts: {{location_facts}}
- Target buyer: {{target_buyer}}
- Photo shoot date: {{photo_shoot_date}}
- Launch date: {{launch_date}}
- Any material fact that will change before launch (price, completion date, permit status): {{pending_changes}}

Write:
1. A "coming soon" listing card — 60 words max, no price, no claim that it is available, one factual hook plus a location fact.
2. A 3-touch teaser sequence (email + social caption + text), one touch per week before {{launch_date}}, each with one specific fact and one action: "reply to get the address," "join the preview list," "tell me what you're looking for."
3. A launch-day email announcing it is live, under 130 words, with the link and one question offering a showing.
4. A short note (for my own use) listing every claim in items 1–3 that must be re-verified on {{launch_date}}, because {{pending_changes}} may have changed.

Rules: never publish a price before the launch date if the seller has not approved it. No "coming soon" urgency tricks beyond the real dates. No fair-housing characterizations. No claims about the property that the photo shoot has not yet confirmed.
```

How to use: Send the teaser sequence only to your sphere of influence and qualified buyers, and re-check every figure on launch day — price changes, permit status, and completion dates are the three things that most often change between teaser and live.
What good looks like: Each teaser touch gives one real reason to stay in the loop; the sequence ends with a clear launch event; the re-verification note at the end lists actual pending changes rather than generic advice; a buyer who received all three touches knows exactly what will happen on launch day.

Open House & Event Marketing

#	Prompt	Use it when	Output
2.1	Personal Open House Invitation	You have a date and a list of real prospects	One email under 140 words
2.2	RSVP Reminder	Two days before the doors open	Email + 160-character SMS
2.3	Day-Of Open House Text	Morning of the event	One SMS + one voicemail script
2.4	Sign-In Sheet Script	Visitors arrive and you need to start conversations	6-question script + lead fields
2.5	Neighbour Drop-Off Note	You want the neighbours and nearby owners to know	Printable note + flyer copy
2.6	Post-Event Thank You and Lead Capture	The event ended and you have sign-in sheets	Email under 150 words + reply paths

#	Prompt	Use it when	Output
2.7	Open House Feedback Digest for Sellers	The next morning after the event	Summary email to the seller
2.8	Event Promo Post Set	The week before the open house	4 platform-native posts

2.1 — Personal Open House Invitation Email

```
You are writing a personal invitation to an open house for one specific buyer. It must not read like a mail merge.

Input:
- Buyer name and what they told me they want: {{buyer_name}}, {{buyer_need}}
- Address, city, date, times: {{property_address}}, {{city}} · {{open_house_date}} · {{open_house_start_time}}–{{open_house_end_time}}
- The one verified feature that matches {{buyer_need}}: {{matching_feature}}
- A verified location fact relevant to them: {{location_fact}}
- Agent name, brokerage, phone, RSVP link: {{agent_name}}, {{brokerage_name}}, {{agent_phone}}, {{rsvp_link}}

Write one email:
- Subject line under 8 words that references their search, not the event type. No "Open House Invitation!" and no emoji.
- First line: reference the specific thing they said they were looking for.
- Second paragraph: address, date, times, and the matching feature explained in one sentence.
- Third paragraph: one honest sentence about what the visit will be like (for example "about 45 people are planning to drop in, so if you want a quiet look, come right at 11").
- Final line: one question — will they attend, and may I set them up with a private showing if the open house does not work for them?

Rules: no urgency that is not true, no fair-housing characterizations, no school or safety claims, no "we have many interested buyers" unless that is literally true today. Under 140 words in the body.
```

How to use: Send one individually per buyer and change the first line for each — a copied invitation to twenty people is the reason open houses underperform. Suppress anyone who attended a previous event or opted out.
What good looks like: The first line proves you read their inquiry; there is a real logistics sentence a buyer could act on; exactly one question at the end; the offer of a private showing is present for people who dislike crowds.

2.2 — RSVP Reminder (Email and SMS)

```
I am sending an RSVP reminder for an open house and I need the email and the SMS to work together
without duplicating.

Event: {{property_address}}, {{city}} · {{open_house_date}} · {{open_house_start_time}}–
{{open_house_end_time}}
Recipient and their need: {{buyer_name}} · {{buyer_need}}
Matching feature: {{matching_feature}}
RSVP link: {{rsvp_link}}
Agent phone: {{agent_phone}}

Write:

1. A reminder email, 90–120 words. Open with the date and time in plain words, then one line on why
this house fits their stated need, then one line on what to expect at the door (sign-in sheet, no
obligation, take as long as you need), then one question: "Can you make it?" Include the address in
full and the agent phone number as a plain fallback if the link does not work.

2. A follow-up SMS version, 160 characters max including spaces, sent the next morning. It must
state the date, the start time, the street or cross street, and one action. No link stacking, no
emoji, no urgency that is not true.

3. A one-line instruction for my CRM: what to record when they reply yes, no, or maybe, and what to
do for each answer.

Rules: do not use "last chance" or "don't miss out" unless the event genuinely ends or sells out.
No fair-housing characterizations. Keep both versions under the limits specified.
```

How to use: Send the email first and the SMS the next morning only to non-responders; if they reply either way, stop the sequence and log the answer instead of nudging again.
What good looks like: Both versions state date, time, and address without needing the other one; the SMS is genuinely under 160 characters including spaces; the CRM instruction is specific enough that anyone on your team could act on it at 8pm.

2.3 — Day-Of Open House Text and Voicemail

```
It is the morning of an open house. I need two short messages that a busy person can act on from
their phone.

Event: {{property_address}}, {{city}} · doors open {{open_house_start_time}} · closes
{{open_house_end_time}}
Recipient: {{buyer_name}} · their stated need: {{buyer_need}}
Matching feature: {{matching_feature}}
Parking or access note: {{access_note}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:

1. A morning-of SMS, under 160 characters including spaces. It must include: doors open time, the
street address, one reason to come (the matching feature), and either the RSVP confirmation or a
simple "see you there." If the recipient did not RSVP, the text must still sound welcoming, not
passive-aggressive.

2. A voicemail script, 20 seconds maximum when read aloud. It must say who is calling, the property
address, the date and time, one specific matching feature, and a callback request. No background
music, no "just following up on my last message."

3. A separate text for anyone who said they would come but is not there 10 minutes after doors open
— warm, no guilt, one line, plus the option to arrive later.

Rules: no fake urgency, no "we're swamped today" unless that is literally true today, no fair-
housing characterizations, no fair-housing claims in any variant.
```

How to use: Send the morning text to confirmed attendees around 9:00am on the event day, and the voicemail only to confirmed attendees you could not reach by text. Use the no-show text once, then stop.
What good looks like: Every message works standalone on a phone screen with no prior context; all three are under their limits; the voicemail sounds like a person, not a notification; the no-show message assumes a traffic jam rather than a rejection.

2.4 — Sign-In Sheet Script and Lead Capture

```
Visitors are arriving at an open house and I need to start conversations without making them feel
processed.

Event and property: {{property_address}} · {{beds}} bd · {{baths}} ba · {{sqft}} sq ft ·
{{list_price}}
What makes the home worth their time: {{one_verified_hook}}
My service area and current inventory: {{service_area}}, {{current_listings}}
Agent name: {{agent_name}}

Write:

1. A sign-in sheet layout as a markdown table with these columns: Name | Phone or email | Areas of
interest | Timeline | Budget range | How they heard about us | Notes. Add one line explaining what
each column is for and how briefly to fill it (for example "timeline — ask as next 3 months / 3–6
months / later").

2. A greeting script, 2–3 spoken sentences, that welcomes a visitor at the door, offers the sign-in
sheet without demanding it, and opens a real conversation. Write it as something a person can say
out loud, not as instructions.

3. Six questions to ask a visitor who signs in, ordered so the easy ones come first. For each
question, note what a good answer tells me. Include at least one question about financing readiness
and one about what would make them move this year.

4. Two questions to ask a visitor who will not sign in, and the one thing I should write down about
them anyway.

5. A note on what to do with the data afterward: the first follow-up channel to use, the timing,
and the one field I must not skip.

Rules: no pressuring, no "sign in so you can enter the prize drawing," and no fair-housing
characterizations. Keep the spoken parts short enough to say naturally.
```

How to use: Print the table as your sign-in sheet and the questions as a pocket card for whoever staffs the door. Every sign-in becomes a CRM task within 24 hours — the sheet without the follow-up is a wasted sheet.
What good looks like: The greeting sounds human when read aloud; the six questions would feel like conversation rather than an interview; the lead sheet captures enough to act on without collecting data you will never use; every lead has a named next action with a deadline.

2.5 — Neighbour Drop-Off Note

```
I am dropping a printed card at nearby homes before an open house and I want it to be useful to the
neighbour, not just a flyer.

Property: {{property_address}}, {{city}} · {{open_house_date}} · {{open_house_start_time}}–
{{open_house_end_time}}
Facts that neighbours care about: {{neighbour_relevant_facts}}
Local facts: {{location_facts}}
What I will be doing during the open house that affects neighbours (noise, parking, street use):
{{impact_on_neighbours}}
Agent name, brokerage, phone: {{agent_name}}, {{brokerage_name}}, {{agent_phone}}

Write:
1. A short note, 60–90 words, formatted as a handwritten-style card. It must: introduce me by name
and brokerage, say what is happening and when, name one fact relevant to someone who lives nearby,
state plainly what I will do to keep the street easy that day, and invite a call with my phone
number.
2. A 40-word flyer block for the back of the card with the property basics, the date and time, and
one reason to come.
3. Three alternative opening lines, one plain, one friendly, one brief.

Rules: no fair-housing characterizations of the neighbourhood, no claims about who the house is
"perfect for," no pressure, no request that the neighbour promote the property on my behalf. Do not
imply any endorsement by the neighbourhood.
```

How to use: Print on card stock and deliver in person — hand to post in the box where legal, or leave it visible and respectful where it is not. Note the delivery in your CRM so you can ask the neighbour for feedback later.
What good looks like: A neighbour reads it and feels informed rather than targeted; the impact sentence is specific and honest; there is no request to "keep an eye out for buyers"; it takes under a minute to read on a doorstep.

2.6 — Post-Event Thank You and Lead Capture Email

```
The open house is over. I have sign-in sheets and I need to send follow-ups that each lead can act
on.

Event: {{property_address}} · {{open_house_date}}
Who attended and what each person said: {{attendee_notes}}
Feedback themes from the session: {{feedback_themes}}
My current and upcoming listings that fit different interests: {{matching_listings}}
Agent name, phone, phone number for direct booking: {{agent_name}}, {{agent_phone}}

Write:
1. A thank-you email to everyone who signed in, 110–150 words. It must: thank them by name, give
one honest observation from the session (for example the recurring comment about the light in the
main room), state that the home is still available, mention ONE other listing that fits a different
interest they showed, and end with one question offering a private showing.
2. Three reply paths in a short markdown table: if they said they are ready, if they are still
comparing, if they are not buying right now — what I send next, and by when.
3. A three-line note to send to people who attended but did not sign in, if I have their details
from a conversation.

Rules: no claims about offer activity or competing buyers unless that is literally true today, no
fair-housing characterizations, no fabricated urgency, no invented renovation or feature details.
```

How to use: Send the thank-you within 24 hours of the event while your notes are fresh, and route each reply path into a dated CRM task rather than a generic drip sequence.
What good looks like: Every thank-you references something that actually happened in the room; the second

listing is genuinely a fit for that person's stated interest; the reply-path table names a specific next action and a date; no email is sent to anyone who asked not to be contacted.

2.7 — Open House Feedback Digest for Sellers

```
I hosted an open house and need to send the seller an honest debrief the next morning.

Property: {{property_address}} · {{list_price}} · {{beds}} bd · {{baths}} ba · {{sqft}} sq ft
Attendance and sign-in count: {{attendance_count}}
Anonymized visitor comments: {{visitor_comments}}
Questions visitors asked most: {{common_questions}}
My read on the feedback and what it means for pricing: {{agent_assessment}}
Price and terms of any verbal or written interest: {{offers_and_interest}}
Comparable sales I have verified: {{comparable_sales}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write a debrief email, 200–260 words:
- Open with the headline number: how many people came through.
- Then the single most common reaction, in plain language, without naming or characterizing
visitors.
- Then the top two questions visitors asked, and my honest answer to each.
- Then where interest stands: any written offer, verbal interest, or "no offers yet" stated
plainly.
- Then one or two sentences on what the feedback means for pricing, with the specific comparable
that supports it — and no promise of a result.
- Close with one question: whether the seller wants to review pricing with me this week, and a
specific time offer.

Rules: no visitor names, no protected-class or neighborhood characterizations, no invented urgency,
no guaranteed sale price, no claiming feedback that was not given.
```

How to use: Send the next morning, before the seller forms their own story about how it went. Attach the sign-in count and the comparable you reference so the claims are checkable.
What good looks like: The headline number is real; feedback is reported as theme, not as a quote from a named person; the pricing read is tied to one named comparable; the closing question offers a concrete time; the seller can reply without needing to ask you a follow-up question to understand where things stand.

2.8 — Open House Promotion Post Set

```
Write the four posts that promote an open house in the week before it happens. Each one must be native to its platform, not the same text reformatted.

Event and property: {{property_address}}, {{city}} · {{open_house_date}} · {{open_house_start_time}}–{{open_house_end_time}}
Specs and price: {{beds}} bd · {{baths}} ba · {{sqft}} sq ft · {{list_price}}
Verified features: {{property_features}}
Verified location facts: {{location_facts}}
Target buyer: {{target_buyer}}
Agent voice: {{agent_voice}}
RSVP link: {{rsvp_link}}

Write:
1. Instagram post (caption max 150 words, 5–8 tags): one specific fact, a question that invites a comment, and a link in bio rather than a link in the caption.
2. Facebook post (120–180 words): more informational, includes the full address, the time, and a comment prompt such as "comment OPEN and I will send the details."
3. A 30-second Instagram Reel or TikTok script with shot-by-shot directions: what the camera sees, in order, with text overlays under 8 words each and one spoken line.
4. A LinkedIn post (100–160 words): framed as a local market note about {{property_address}} and {{local_market_angle}}, ending with a soft invitation rather than a hard sell.

For each, add a one-line note on the photo or footage required and one line on the compliance check before posting.

Rules: no fair-housing characterizations, no school or safety claims, no "last chance" unless the event genuinely ends, no claims about competing interest. Every post uses real photos or video of this property only.
```

How to use: Schedule across the week with the Reel two days before the event and the reminder post the morning of. Confirm the address, date, and price on each post the day you publish.
What good looks like: The four posts do not read as one text in four places; each has the platform's native format; every post contains at least one fact a buyer could verify; the compliance note flags the same fair-housing risk in each; the Reel works with no voiceover.

Buyer Nurture & Follow-up

#	Prompt	Use it when	Output
3.1	Speed-to-Lead First Reply	A new inquiry lands and you reply within minutes	Email + SMS + 4 qualifying questions
3.2	Pre-Approved Buyer Check-In	A pre-approved buyer goes quiet	3-touch check-in sequence
3.3	First-Time Buyer Education Email	A buyer asks what a step of the process means	Plain-language explainer under 150 words
3.4	Budget-Qualified Follow-Up	A buyer gave a budget but has not replied	Qualification email with one question
3.5	Showing Feedback Email	A buyer has seen a property and gone quiet	Feedback email plus a decision helper
3.6	Offer Status Holding Email	An offer is submitted and you are waiting	Status update with a real timeline
3.7	"Still Looking" Re-Engagement	A lead has been dormant for 60+ days	Re-engagement email plus SMS
3.8	Lead Nurture Sequence Builder	You need a multi-touch plan for one lead	5-touch sequence with exit rules

3.1 — Speed-to-Lead First Reply

```
A new inquiry just came in and I am replying within the first five minutes. Write the reply.

Lead: {{lead_name}} · came from {{lead_source}} · asked about {{property_or_area}}
Their exact words: {{lead_message_text}}
Agent name, brokerage, phone, calendar link: {{agent_name}}, {{brokerage_name}}, {{agent_phone}},
{{calendar_link}}

Write three things:

1. A reply email, 90–130 words. Structure: greet them by name, quote the specific thing they asked
about in their own words, answer it in two sentences using only facts I give you below, give one
reason it might not fit them (honesty, not hedging), and offer two concrete next steps. Use these
verified facts: {{verified_property_facts}}. Do not describe any area, school, or neighborhood in
subjective terms.

2. A parallel SMS, 160 characters max, sent immediately after: who is texting, the single most
useful fact, and one action. Include my name and brokerage so it is identifiable.

3. Four qualifying questions I should ask on the next call, in order, each with a one-line note on
what the answer tells me. Include a financing-status question and a timeline question.

Rules: no "thanks for reaching out!" boilerplate, no "I am the best agent," no invented details
about properties I have not given you, no fair-housing characterizations, and no promise about
market timing.
```

How to use: Send the email and SMS within five minutes of the inquiry, then log the four questions in the CRM as your call agenda. Reply once more if they do not answer within 24 hours, then move to the nurture sequence.
What good looks like: The first line shows you read their message; the answer to their question is specific; the SMS adds information rather than repeating the email; the four questions would fill a 12-minute call; nothing in it sounds like it was written for every lead.

3.2 — Pre-Approved Buyer Check-In for a Quiet Lead

```
I have a pre-approved buyer who went quiet. I do not want to spam them, but I also do not want to lose them.

Buyer: {{buyer_name}} · pre-approved status: {{preapproval_status}} · loan type: {{loan_type}} · budget: {{budget_range}}
Areas they want: {{target_areas}} · stated timeline: {{timeline}}
Last contact: {{last_contact_date}} · what they were shown: {{last_showing_details}}
What I have that matches them now: {{matching_listings}}
Market note that is genuinely useful to them: {{market_note}}

Write a 3-touch check-in sequence (email, then a text 3 days later, then a short email 8 days after):

1. Touch 1 — email, 110–150 words. Open with a specific update tied to their search (a new listing in {{target_areas}}, or a change in the market note), not "checking in." Give the detail first, then one question. No "just following up on my last message."

2. Touch 2 — SMS, 160 characters max. One useful fact and one question. If they reply at all, stop the sequence and talk to them.

3. Touch 3 — email, 90–120 words. Offer a concrete service: a short call to sharpen the search, a list of homes in their range with an honest note on each, or an introduction to a lender if their pre-approval needs updating. Give a deadline and a slot.

For each touch add a one-line instruction: send only if, and skip if.

Rules: no manufactured urgency, no false "before it's gone" claims, no fair-housing characterizations, and no pressuring them to commit.
```

How to use: Trigger only after a real gap of three weeks of no contact, and skip any buyer who asked to be contacted less often. Log each touch so the next one does not repeat a point already made.
What good looks like: Touch 1 leads with information they did not have; the send/skip conditions are specific enough to automate; Touch 3 offers something that only you can do; no touch contains the phrase "just circling back"; every touch has one clear question or action.

3.3 — First-Time Buyer Education Email

```
Write an email that explains one part of the home-buying process to a first-time buyer, in plain language, without jargon and without condescension.

Buyer: {{buyer_name}} · what they asked: {{buyer_question}}
Their stated worry: {{buyer_concern}}
What they already know: {{buyer_knowledge_level}}
My actual answer and the specifics for their situation: {{agent_explanation}}
Local specifics worth mentioning: {{local_process_facts}}
Agent name, phone, calendar link: {{agent_name}}, {{agent_phone}}, {{calendar_link}}

Write:
1. The email, 120–160 words. Structure: answer the question in the first sentence, explain the why in plain terms, give the one practical thing they can do this week, name the risk of getting it wrong, and end with one question or one link. Define any term the first time you use it. Avoid "simply," "just," "obviously," and "don't worry."

2. A three-bullet "what this means for you" summary I can paste into my CRM note.

3. A short FAQ of three follow-up questions this buyer is likely to ask next, with one-line answers each.

Rules: no legal, tax, lending, or inspection conclusions — state facts and refer to the appropriate professional where needed. No promises about rates, timelines, or outcomes. If {{agent_explanation}} leaves a gap, write [VERIFY: ...] rather than filling it in.
```

How to use: Use this whenever a first-time buyer asks what something means — escrow, earnest money, pre-approval, appraisal, contingency, closing costs. Personalize it, then save the version that worked so you can reuse the structure.

What good looks like: A buyer with no real estate vocabulary could read it once and repeat the key idea to a friend; no term appears without a plain-language definition; the advice is specific to their situation rather than generic; it ends with one small action, not a request to buy.

3.4 — Budget-Qualified Follow-Up

```
I have a lead who told me their budget and then stopped replying. I want to move them forward
without pushing.

Buyer: {{buyer_name}} · budget range: {{budget_range}} · stated areas: {{target_areas}} · timeline:
{{timeline}}
What they told me about their wants: {{buyer_wants}}
Last contact date and how it ended: {{last_contact_date}} · {{last_contact_summary}}
Listings that genuinely fit that budget: {{matching_listings}}
Market data for that range: {{market_data}}

Write:
1. A follow-up email, 120–160 words. Open by naming one listing that fits their budget and what
makes it fit — price, size, location fact. Then give one honest observation about that price band
right now. Then ask ONE diagnostic question that helps you understand their real constraint: for
example whether their budget assumes a certain monthly payment, whether they need a specific
bedroom count, or whether their timeline has hardened.

2. Three budget scenarios as a markdown table — if their budget is {{budget_range}}, what that buys
in {{target_areas}} under each of these: cash buyer with 20% down, financed with 10% down, financed
with 3% down. Include the monthly payment range, the monthly payment including taxes and insurance,
and the homes likely to fit. Add a note on what changes at the edges of the range.

3. A short list of the assumptions behind the table, so I can check them, and a one-line note on
which assumption the buyer's lender should confirm.

Rules: no lending or tax advice, no estimates presented as quotes, no fair-housing
characterizations, and no assumption that a higher budget means a better buyer.
```

How to use: Use this to find the real constraint behind a stated budget, then send the buyer a lender introduction or a shortlist that matches the scenario they actually qualified for.
What good looks like: The email leads with a specific fit rather than "checking your budget"; the table separates principal from total carrying cost so the buyer sees what they actually pay monthly; the assumptions are listed and checkable; the diagnostic question reveals a constraint you can act on.

3.5 — Showing Feedback Email

```
A buyer toured {{property_address}} and has been quiet since. I want to help them decide, not
pressure them.

Property: {{property_address}} · {{list_price}} · {{beds}} bd · {{baths}} ba · {{sqft}} sq ft
Verified features: {{property_features}}
What I observed on the showing (quiet, functional, small yard, needs work): {{agent_observations}}
What the buyer said in the moment, if anything: {{buyer_reaction}}
Comparable listings they could see next: {{comparison_listings}}
Their stated priorities: {{buyer_priorities}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. An email, 120–160 words. Structure: reference the showing specifically, give my honest two-
sentence read including the one thing that might not work for them, offer the matching listing as a
next step, and ask the one question that would settle it — price, layout, location, or readiness to
move. No "we are still available and receiving interest" unless that is literally true today.

2. A decision helper as a small markdown table with three columns: what they liked, what they
hesitated on, what the other option offers instead. Fill it only from the facts above.

3. Two versions of one closing line: a gentle version and a direct version that asks whether they
want to keep looking or take the next step, so I can choose based on how engaged they seem.

Rules: never tell a buyer what they should think of a property, no invented feedback, no claim that
other buyers are interested unless true, no fair-housing characterizations, no guaranteed
appreciation.
```

How to use: Send within 24 hours of the showing while you still remember the visit, and record the answer as one of three states: proceed, pass, or revisit. Only the "revisit" state enters a longer nurture sequence.
What good looks like: The email contains one observation only a person who walked the house would make; the table separates what they said from what you observed; the closing question makes it easy for the buyer to answer; the buyer does not feel chased for having an opinion.

3.6 — Offer Status Holding Email

```
A buyer's offer is submitted and I am waiting on the seller. I need to update the buyer honestly
without inventing movement.

Buyer: {{buyer_name}} · property: {{property_address}} · list price: {{list_price}}
Offer details: {{offer_price}} · {{offer_terms}} · submitted {{offer_date}}
Current status: {{offer_status}} · what I expect next and when: {{expected_timeline}}
What the seller has said, if anything: {{seller_feedback}}
What I am doing while we wait: {{agent_actions}}
Competing situation, only if true: {{competition_status}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A status email, 110–150 words. Structure: state plainly where the offer stands, state what I
expect to happen next with a real time frame, tell the buyer the one thing that is genuinely useful
for them to prepare (documents, timing, a decision they may need to make), tell them what I am
doing on their behalf, and end with a clear promise: when I hear back you will hear from me by
{{promise_time}}. If there is no news, say that and do not pad it.

2. A second version for a buyer who is anxious: 90–120 words, acknowledging the waiting directly,
with one concrete thing happening on their file and a firm promise of a call by {{promise_time}}
even if there is no answer yet.

3. A short list of what you must NOT say in these emails: what not to reveal about the seller's
position, counteroffer timing, or competing offers.

Rules: no invented deadlines, no promising an outcome, no sharing the seller's personal information
or negotiation strategy, no "the seller is deciding" as a filler.
```

How to use: Send the update at the first checkpoint you set — typically within a few hours of submission and again at any promised time point. Log the promise time so you actually call at that hour, even with no news.
What good looks like: The buyer knows exactly where things stand and when they will hear from you again; the "prepare for this" item is real; the anxious version does not hide behind process language; nothing in the email reveals another party's position or strategy.

3.7 — "Still Looking" Re-Engagement

```
A lead in my CRM has not responded to anything in the last 60 days. I want to reopen the
conversation without acting like we never spoke.

Lead: {{lead_name}} · original inquiry: {{original_inquiry}} · source: {{lead_source}}
Areas and budget from the original conversation: {{target_areas}} · {{budget_range}}
What I have that fits them now: {{new_matching_listings}}
Market change since we last spoke: {{market_change}}
Their stated timeline, and whether it has passed: {{timeline}} · {{timeline_status}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A re-engagement email, 120–160 words. Structure: reference the original conversation and the
date, acknowledge that life moved on without apology, give one specific update that is relevant to
their search, state honestly what has changed in the market and what has not, and ask one question
that makes it easy to reply — "still looking", "paused", or "found something". No guilt, no "you
may have missed out", no fake scarcity.

2. An SMS version, 160 characters max, sent two days after the email, only if they did not reply.
One update, one question, my name and brokerage.

3. A three-option reply table: what to send if they say still looking, if they say paused, and if
they say they bought elsewhere. For each, the next action and the next scheduled contact.

Rules: no claims that they missed out, no fake scarcity, no fair-housing characterizations, and a
clear opt-out line in both the email and the SMS.
```

How to use: Run this for dormant leads only after you have actually reviewed their file, and suppress anyone on a do-not-contact list or in an active transaction elsewhere. Log the outcome — "paused" leads get a quarterly check-in, not the same cadence.

What good looks like: The email names the original conversation and the date; the market update is real and sourced; the reply is easy to give in one word; the "bought elsewhere" branch asks for nothing and says thank you; both messages make opting out simple.

3.8 — Lead Nurture Sequence Builder

```
Build a 5-touch nurture sequence for one specific lead, based on what I actually know about them.

Lead: {{lead_name}} · source: {{lead_source}} · original inquiry: {{original_inquiry}}
Known facts: {{budget_range}} · {{target_areas}} · {{timeline}} · {{preapproval_status}} ·
{{family_or_household_details}} · {{must_haves}}
Where they are in the process right now: {{current_stage}}
What I want them to do at the end of the sequence: {{sequence_goal}}
My listings and inventory relevant to them: {{matching_listings}}
Local content I can send: {{local_content_assets}}
Agent name, phone, calendar link: {{agent_name}}, {{agent_phone}}, {{calendar_link}}

Build the sequence as a markdown table with columns: # | Day | Channel | Subject or first line |
Core message | Single CTA | Exit condition. Then write each of the five touches in full beneath the
table, each under 150 words.

Rules for the touches:
- Touch 1 delivers value or answers something they asked. Touch 2 proves I am tracking their
search. Touch 3 handles the biggest risk they have (usually timing, financing, or a missed fit).
Touch 4 offers a concrete service, not a listing. Touch 5 offers a call.
- No more than two touches in a row without a direct question.
- Every exit condition is a real signal: a reply, a showing booked, a viewing of a listing, a
request to stop.
- No manufactured urgency, no false scarcity, no fair-housing characterizations, and no sending
listings that do not fit their stated criteria.
```

How to use: Run this per lead once you have enough to personalize, and load it into your CRM with the exit conditions set as automation rules. Review the sequence manually before the first send — the value is in the fit, not the automation.

What good looks like: Every touch contains something specific to this lead; the CTA on each touch is one action; the exit conditions would actually stop the sequence if you set them as triggers; the sequence never sends a listing outside the stated criteria; touch 5 is a conversation, not another email.

Seller Nurture & Communication

#	Prompt	Use it when	Output
4.1	Listing Presentation Recap	Right after the pricing and marketing meeting	Recap email + next-step plan
4.2	Weekly Market Update	A listing is live and sellers want to know what is happening	Weekly email with real numbers
4.3	Showing Feedback Summary	Showings happened and you need to report them honestly	Pattern summary + next action
4.4	Price Review Email	It is time to talk about price	Recommendation email with comps
4.5	Price Reduction Announcement	The price is changing and buyers need to know	Buyer-facing email + text + social
4.6	Contract-to-Close Milestone Update	A deal is under contract	Milestone email with date checklist
4.7	Seller Referral and Past Client Reactivation	You need listings from past clients and sphere	Reactivation email + ask script

#	Prompt	Use it when	Output
4.8	Seller Satisfaction Survey and Review Ask	A deal closes and the client was happy	Survey + review request sequence

4.1 — Listing Presentation Recap

```
I just finished the listing presentation with a seller. Send the recap email that locks in the plan.

Seller: {{seller_name}} · property: {{property_address}}
Recommended list price and reasoning: {{recommended_price}} · {{pricing_rationale}}
Comparable sales I presented: {{comparable_sales}}
Marketing plan: {{marketing_plan}}
Preparation items and who owns each: {{prep_tasks}}
Photography and timeline: {{photo_date}} · {{launch_date}}
What I told the seller I would handle: {{agent_commitments}}

Write:
1. A recap email, 200–280 words. Structure: confirm the decision in the first line, restate the recommended price with the two strongest reasons behind it (not all of them), describe the marketing plan in plain terms the seller can picture, list the preparation items in a markdown table with an owner and a date for each, confirm the photo and launch dates, and close with the exact next action and the date it happens.

2. A markdown table of the plan: item | owner | deadline. Include every item from {{prep_tasks}} and nothing invented.

3. A one-line confirmation of the legal agreement status, phrased as a to-do for me, not as a statement of the client's obligations: [VERIFY: signed listing agreement and required disclosures].

Rules: no guarantee of sale price or timing, no pressure, no fair-housing characterizations, and no promise I cannot keep. If any price figure is not confirmed, write [VERIFY: ...].
```

How to use: Send within two hours of the meeting, while the seller still remembers the conversation. Attach the comparison sheet so the reasoning travels with the email.
What good looks like: The seller can describe the price and plan to a spouse after reading it; every prep task has an owner and a date; the timeline is stated in dates, not "soon"; no commitment exceeds what you can control; the recap reads like a record, not a pitch.

4.2 — Weekly Market Update Email

```
Write my weekly update to the sellers of a live listing. Real numbers only — if I do not have a number, leave it out rather than estimating.

Property: {{property_address}} · list price: {{list_price}} · days on market: {{days_on_market}}
This week's activity: {{views}} · {{inquiries}} · {{showings}} · {{save_count}} · {{online_views}}
Feedback themes received: {{feedback_themes}}
New comparable sales and listings that came up this week: {{weekly_comparable_activity}}
Current competing inventory: {{competing_listings}}
Price and terms of any offer or interest: {{offer_status}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A weekly email, 180–240 words, using this fixed structure:
   - A two-line headline that states the single most important number of the week (for example "Three showings, two written requests for a private viewing").
   - A markdown table of this week vs last week: views, inquiries, showings, saves, days on market.
   - One paragraph on what buyers said, in themes, with no visitor names.
   - One paragraph on the market: what comparable homes did, what came on the market, and how that compares to the property.
   - One paragraph on what I plan to do next week and the one thing I need from the seller, if anything.
   - A closing line asking one question.

2. A one-line "no news" version for a week where nothing happened, so I still send something honest rather than skipping the week.

Rules: never estimate or estimate-as-a-range any activity number; state the source period ("Monday through Sunday"); no invented offers or interest; no fair-housing characterizations; no "buyers are waiting" unless it is true today.
```

How to use: Send on the same day each week so the numbers are comparable, and keep the week-over-week table in every email so the seller can see the trend instead of a single snapshot.
What good looks like: Every number is real and dated; the table makes the trend visible in four weeks; the feedback paragraph reports themes without characterizing visitors; the seller knows what you need from them, even if the answer is "nothing"; a quiet week still gets an honest email.

4.3 — Showing Feedback Summary

```
Showings happened this week and I need to report them honestly to the seller — including the criticism.

Property: {{property_address}} · list price: {{list_price}} · days on market: {{days_on_market}}
Number of showings and who showed: {{showing_count}} · {{showing_sources}}
Verbatim comments, anonymized: {{visitor_comments}}
Repeated questions: {{common_questions}}
Price reactions, if any: {{price_reactions}}
My read on the pattern and its cause: {{agent_analysis}}
Relevant comparables: {{comparable_sales}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A feedback email, 200–260 words. Structure: state how many people came through, then the dominant reaction in one sentence, then the most common objection in the seller's own terms, then one or two compliments that appeared more than once, then my read on WHY the pattern exists (layout, price against competition, condition, or timing), then one recommended action with a deadline, and one question.

2. A markdown table of recurring themes with columns: theme | how often it appeared | what it suggests | what I recommend. Include at least one theme that is inconvenient.

3. A short script of what I would say if the seller pushes back on the feedback — acknowledge, then move to the action.

Rules: no visitor names, no protected-class or neighborhood characterizations, no softened version of a repeated criticism, no invented quotes, and no implication that feedback guarantees a future offer.
```

How to use: Send within 24 hours of the showings while the detail is fresh, and attach the anonymized notes. When the feedback is unflattering, deliver it in the first third of the email rather than burying it.
What good looks like: The inconvenient theme is included and tied to an action; the feedback reads as transcribed, not softened; the recommendation has a deadline; the seller is not left guessing what you want them to do; no visitor is identifiable.

4.4 — Price Review Email

```
It is time for a scheduled price review on a live listing and I need to present a recommendation
with the evidence attached.

Property: {{property_address}} · current list price: {{list_price}} · days on market:
{{days_on_market}}
Activity since launch: {{views}} · {{showings}} · {{inquiries}}
Buyer feedback to date: {{feedback_summary}}
Verified comparable sales: {{comparable_sales}}
Current competing inventory: {{competing_listings}}
Any offers or written interest: {{offer_status}}
My recommended action: {{recommended_action}} and reasoning: {{agent_rationale}}
What the seller cares most about: {{seller_priority}}

Write:
1. A price review email, 220–300 words. Structure: state the review is happening because
{{days_on_market}} days have passed, present the activity numbers in a markdown table, summarize
the buyer feedback in two sentences including the main objection, state what the comparables show
with two named examples, give your recommendation and the reasoning in plain terms, explain the
downside of doing nothing for another two weeks, and end with one question that asks for a
decision.

2. A markdown table of options: option | price | expected effect | risk. Include: hold, reduce to
{{reduced_price}}, and withdraw and re-market if applicable. Be honest about what is uncertain.

3. Two sentences I can say on the phone if the seller says "just drop it ${{counter_offer}}" — the
reply must separate price from the other issue, which is {{real_issue}}.

Rules: no guarantee of a faster sale at a lower price, no claim that reducing price will produce
multiple offers, no fair-housing characterizations, and every comparable named must be real and
verifiable.
```

How to use: Send it before the seller has to ask, and bring the comparable sheet to the follow-up call. If the seller rejects the recommendation, document the decision in writing and set the next review date in that same email.
What good looks like: The activity table is real; two comparables are named and verifiable; the recommendation is a clear recommendation, not a menu of everything; the options table states each risk honestly; the phone-reply separates price from the actual problem instead of arguing about the number.

4.5 — Price Reduction Announcement

```
The price on {{property_address}} is changing and I need to tell buyers, agents, and the public accurately.

Property: {{property_address}} · old price: {{old_price}} · new price: {{new_price}} · date of change: {{change_date}}
What changed to justify the reduction: {{price_change_reason}}
Verified features that remain: {{property_features}}
What is genuinely different about this home now: {{differentiator}}
Days on market: {{days_on_market}}
Agent name, brokerage, phone, listing link: {{agent_name}}, {{brokerage_name}}, {{agent_phone}}, {{listing_link}}

Write three assets:

1. A buyer-facing email (80–110 words): state the new price and the date it takes effect, give one honest reason for the change, describe what makes the home still worth a look, and end with one action. No "we are motivated" unless the seller actually said so, no "price dropped" without the number, and no claim that the seller is under pressure.

2. A text message for buyers who asked to be notified of price changes (160 characters max): new price, address, one differentiating feature, one action.

3. A social post (60–100 words) with a clear factual hook about the change and one CTA. No fake urgency, no "before it's gone."

4. A one-line internal instruction: which contacts get which message, in what order, and when to stop texting people who do not respond.

Rules: the new price must be stated as a number in every asset, not as "reduced"; no fair-housing characterizations; no suggestion that the reduction is temporary or final unless that is stated in writing by the seller; no invented competing offers.
```

How to use: Update the price on every portal first, then send the emails, texts, and post — buyers who check the listing before the email arrives should find the same number. Note the change date in the CRM so the feedback summary can reference it.

What good looks like: The number appears in every asset and matches the MLS; the reason for the change is honest and factual; no asset implies distress; a buyer reading it can tell what changed today and what to do next; the internal instruction prevents texting the same person three times.

4.6 — Contract-to-Close Milestone Update

```
My client is under contract on {{property_address}}. Send the milestone update that keeps everyone
on schedule.

Buyer: {{buyer_name}} · seller: {{seller_name}} · property: {{property_address}}
Closing date: {{closing_date}} · days to close: {{days_to_close}}
Agreed price and terms: {{contract_terms}}
Completed milestones: {{completed_steps}}
Outstanding items with owners and deadlines: {{outstanding_items}}
Dates that depend on the lender, inspection, or title company: {{third_party_dates}}
Documents already received and still needed: {{documents_status}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A milestone email, 180–240 words, with a markdown table: milestone | date | owner | status.
Cover: contract signed, earnest money deposited, inspection, appraisal, loan commitment, title and
escrow, final walkthrough, signing and funding. Mark each as complete, on schedule, or needs
action.

2. A short "your action needed" section at the top listing exactly what the client must do, with
dates, and nothing else. If nothing is needed from the client, say so in one line.

3. A risk paragraph that names the item most likely to delay this file — the earnest money, the
inspection response, the appraisal gap, the loan commitment, or the title — and what happens if it
slips, without making a legal or lending determination.

4. A short client-facing FAQ of three questions they are likely to ask next (for example about what
happens between now and the walkthrough).

Rules: no legal, lending, tax, or inspection conclusions, no guarantee of a smooth closing, no
invented dates — use only the dates provided, and mark the ones that are third-party dependent as
estimates.
```

How to use: Send the first version the day after the contract is accepted, then weekly as closing approaches, tightening to twice a week inside the final 14 days if issues are open. Print the table and use it as your own tracker.
What good looks like: The action list is empty when nothing is needed and specific when it is not; third-party dates are labeled as estimates; the risk paragraph names one item and its consequence; the table shows who owns every open step; no step is invented to fill a gap.

4.7 — Seller Referral and Past Client Reactivation

```
I want listings from past clients and my sphere of influence, and I want the ask to be specific and easy to decline.

Who I am contacting: {{past_client_name}} · relationship: {{relationship_context}} · when we last worked together: {{last_transaction_date}}
Their former street and area: {{former_area}}
What is happening in that area that they would want to know: {{area_market_note}}
Why I would be a good fit for a sale there now: {{agent_fit}}
Timing context: {{timing_context}} · their likely next move: {{likely_timeline}}
My referral partners and what I actually need: {{referral_partner_need}}
Agent name, phone, calendar link: {{agent_name}}, {{agent_phone}}, {{calendar_link}}

Write:
1. A reactivation email, 130–170 words. Structure: reference our past work together with the date, deliver one genuinely useful update about the area, tie that to what it means if they were thinking of selling now, ask ONE specific question about their timeline, and offer a concrete low-commitment next step (a home-value review with no obligation to list). Make clear that "no" and "not yet" are acceptable answers.

2. A second version for a neighbor or sphere contact I have never represented, 110–150 words, focused on the area note and one question.

3. A referral ask script for a phone call, 8 to 10 lines, that asks for one named referral and explains exactly what I will do with the introduction so nobody feels they have to sell on my behalf.

4. A short note on what NOT to offer (gifts, incentives, or anything your brokerage rules prohibit) and how to check first.

Rules: no pressure, no guilt, no implication that their home is worth more now than it was, no fair-housing characterizations, and no claim about market conditions you cannot source.
```

How to use: Send to past clients only after a positive experience, once every 18 to 24 months, and vary the area note each time. Ask for one referral at a time and never imply the referred person must list with you.
What good looks like: The area note is specific and sourced; the single question about timeline is easy to answer; the "not yet" answer has a defined path rather than a dead end; the referral script removes the awkwardness of the introduction; nothing is offered that your brokerage has not cleared.

4.8 — Seller Satisfaction Survey and Review Ask

```
A transaction has closed. I want to find out whether the seller was actually satisfied before I ask for a review.

Seller: {{seller_name}} · property: {{property_address}} · closing date: {{closing_date}}
How the transaction went from my side, including the hard parts: {{transaction_notes}}
Things I want to check whether I handled well: {{service_checks}}
Things that went wrong or took longer than expected: {{issues_to_probe}}
My contact details: {{agent_name}}, {{brokerage_name}}, {{agent_phone}}, {{agent_email}}

Write:
1. A short satisfaction check, 80–110 words, sent as the first contact after closing. It must: thank them, ask one question about how the process actually felt, name one specific moment from their transaction (the hardest or the smoothest) and ask about it, and make it easy to raise a problem ("if anything did not go the way you expected, tell me and I will fix it"). No review ask yet.

2. A branching guide as a markdown table: if they are happy, if they are lukewarm, if they are unhappy — what I send next, what I offer to fix, and when I follow up.

3. A review request, 80–110 words, to send only on the happy branch: one-line thank-you, one sentence on why a review helps other sellers in {{city}}, a direct link to my profile, and one line saying I would rather hear a complaint directly than read it in a review.

4. One gentle reminder, 50–70 words, sent 14 days later only if there was no response, plus the instruction to stop after that.

Rules: no incentives, gifts, or upgrades tied to a review — prohibited in many jurisdictions and bad practice everywhere. No guilt, no "you probably forgot", and no asking a satisfied client to send a review before I have confirmed they are satisfied.
```

How to use: Send the satisfaction check first and wait for the reply — the review ask in branch 3 only goes out after an affirmative answer. Log every issue the seller raises in the CRM and close the loop before asking anything about reviews.
What good looks like: The first email asks about the experience, not about a review; the branch for an unhappy seller offers a fix and a deadline; the review ask includes a direct link and an invitation to complain privately; the reminder is one message and then silence; no incentive of any kind is mentioned.

Objection Handling

#	Prompt	Use it when	Output
5.1	"It's Too Expensive"	A buyer says the price is too high	Diagnostic script + reframe + follow-up
5.2	"We Need to Think About It"	A buyer stalls after a showing	Respectful close + follow-up plan
5.3	"We Already Have an Agent"	A lead is working with someone else	Referral-style reframe + exit offer
5.4	"The Market Is Bad"	A seller or buyer blames the market	Data-anchored reframe + action plan
5.5	"Let Me Talk to My Partner"	The decision-maker is not in the room	Triad meeting script + follow-up
5.6	"We're Not Ready to List Yet"	A seller is putting off a decision	Timeline-mapping script + trigger plan
5.7	"Your Commission Is Too High"	A seller pushes back on fees	Value-breakdown email + comparison

#	Prompt	Use it when	Output
5.8	Objection Classifier and Response Builder	You have raw buyer or seller objections	Classified table + per-type replies

5.1 — "It's Too Expensive"

```
A buyer said the price at {{property_address}} is too high. I want to understand which price they mean before I defend any number.

Buyer and their exact words: {{buyer_name}} · {{buyer_objection_words}}
What they are comparing against: {{comparison_reference}} · their stated budget: {{budget_range}} · their monthly target: {{monthly_payment_target}}
Verified features and what they actually cost: {{property_features}} · {{recurring_costs}}
Verified comparables: {{comparable_sales}}
Market data on the gap between list and sale price: {{market_gap_data}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A diagnostic question sequence, 4 questions in order, that separates four different meanings of "too expensive": total price versus monthly payment, price versus value relative to comparables, price versus their budget ceiling, and price versus other homes they liked. For each question, note what each answer tells me and what I would do differently.

2. A spoken response, 4 to 6 sentences, that reflects their concern, identifies which of the four meanings it is, and responds to that one only. Include the one number that matters most for that interpretation. If the answer is "it genuinely does not fit their budget", say so plainly and offer to keep looking rather than pushing.

3. A written follow-up email, 100–140 words, that handles the most likely interpretation, gives one verified piece of evidence, and asks one question.

4. A one-line rule for when the honest answer is "this is over budget" and the right move is to walk away — and what to offer instead.

Rules: no discounts, no pressure tactics, no fake scarcity, no fair-housing characterizations, and no claiming the home is worth more than the market supports. If I lack the comparable or market data, write [VERIFY: ...].
```

How to use: Use the four questions on the call before writing any reply — most "too expensive" objections are a budget ceiling or a monthly-payment misunderstanding, not a valuation argument. Record the interpretation in the CRM so the next call starts where this one ended.
What good looks like: The questions isolate one specific meaning rather than arguing about price generally; the spoken response uses one number that matters to that interpretation; the email gives evidence rather than adjectives; the walk-away rule is explicit, because protecting the relationship matters more than one listing.

5.2 — "We Need to Think About It"

```
A buyer saw {{property_address}} and said they need to think about it. I want to respect that while still making sure I understand the real blocker.

Buyer: {{buyer_name}} · what they said: {{buyer_objection_words}} · what they said they liked: {{what_they_liked}} · what they hesitated on: {{hesitations}}
Timeline and budget: {{timeline}} · {{budget_range}}
Competing homes they are considering: {{competing_options}}
The one thing that would decide it for them: {{decision_factor}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A response script for the moment they say it, 4 to 6 sentences. It should: accept the request without flinching ("that makes sense"), name the two or three specific things they reacted to so they feel heard accurately, ask what specifically they want to think through, and offer a concrete way to help them decide — reviewing the comparable sales together, a second look with a contractor's eye, or a quick check on a specific number.

2. Three questions that surface the real blocker without arguing: one about what needs to be true for them to move, one about who else has an opinion, one about what would make them walk away entirely.

3. A follow-up plan as a markdown table: timing | channel | message angle | what I send. Include a same-week email, a 10-day check-in, and a 25-day "should I keep sending this home" message.

4. A one-line rule for when the right move is to stop pushing and let the listing agent know this buyer is thinking, so the seller is not told there is an offer.

Rules: no pressure, no "the market won't wait", no fabricated competing buyers, no fair-housing characterizations, and never repeat a follow-up the buyer already ignored twice.
```

How to use: Send the follow-up on the schedule in the table and log every touch. If the buyer goes quiet after the second touch, close the loop with the seller honestly — "still interested, thinking" is not an offer.
What good looks like: The response accepts the request without arguing; the questions find a decision factor rather than a stall; the follow-up plan has specific angles rather than "just checking in"; the rule prevents you from reporting enthusiasm as an offer; no buyer receives the same message twice.

5.3 — "We Already Have an Agent"

```
A new lead told me they are already working with an agent. I want to find out whether that relationship is active before I either compete with it or step aside gracefully.

Lead: {{lead_name}} · how long they have been working with their agent: {{relationship_length}}
Why they contacted me: {{contact_reason}} · what they want that they are not getting: {{unmet_need}}
What I do that their agent may not: {{agent_differentiators}} · {{niche_or_service}}
Local data that supports my case, if relevant: {{supporting_data}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A reply email, 110–150 words. Structure: acknowledge without challenging the other agent, ask what prompted them to reach out, state one specific thing I can do that is genuinely different (not "I work harder"), offer a concrete second opinion that costs them nothing — a comparable sales review of the home they are considering — and give them a clear, no-pressure exit: if their agent is covering it, tell me and I will stop emailing.

2. A short script for when they mention the other agent's name or brokerage on the phone, 3 to 4 sentences, that finds out whether the other agent is actively marketing the property, and explains how to get a second opinion without offending anyone.

3. A decision table for me: if they say the other agent is actively marketing, if they say the listing is not being marketed anywhere, if they say they are just browsing with a friend — what I do next in each case.

4. A one-line note on how to handle the situation where the other agent refuses to cooperate or the lead is in a contract elsewhere.

Rules: never disparage another agent, never disparage a brokerage, never suggest the client breach their agreement, no fair-housing characterizations, and no claim that I have a relationship with a listing I do not have.
```

How to use: Send this as a one-touch reply, then place the lead in a low-frequency nurture rather than a sequence. If the other agent is marketing the property properly, say so plainly and offer to stay in the file for future needs.
What good looks like: The email offers something the current agent probably will not — a second opinion, not a criticism; the exit line is genuine, so the reply can be answered "stop emailing"; the decision table makes the follow-up obvious; nothing implies the client should break an agreement.

5.4 — "The Market Is Bad"

```
Someone told me the market is bad. I need to know whether they mean slow, overpriced, or
unpredictable, because each needs a different response.

Speaker: {{speaker_name}} · buyer or seller: {{speaker_type}} · their exact words:
{{objection_words}}
Their specific concern: {{specific_concern}} · the property or area: {{property_or_area}}
Verified local data: days on market, inventory, absorption rate, sale-to-list ratio, months of
supply: {{market_data}}
Comparable sales and their conditions: {{comparable_sales}}
Properties in this area that sold above asking: {{above_list_examples}} · properties that sold
below: {{below_list_examples}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. Four diagnostic questions that determine which kind of "bad" they mean, and what to do for each
answer.

2. A spoken response for each of the three versions — slow, overpriced, unpredictable. For each:
acknowledge, give one specific verified data point from {{market_data}}, one named example from the
comparable data, and one action that changes the situation. For sellers, include the specific
strategy for their situation: price positioning, preparation, timing, or a different launch plan.
For buyers, include what the slow market gives them: negotiating room, inspection leverage, or time
to decide.

3. A written email, 120–160 words, that uses two real data points and one real example, and ends
with a specific next step.

4. A one-line caution about what NOT to say: no claims that the market is about to turn, no
predictions about rates, and no guarantee that a strategy will produce a result.

Rules: no market predictions, no interest-rate forecasts, no guarantee of timing or price, no fair-
housing characterizations, and every statistic must come from {{market_data}} or another verified
source.
```

How to use: Pull the local data before the call so the response is specific to your market rather than generic reassurance. When a seller is right that their market is slow, acknowledge it and change the plan instead of arguing.
What good looks like: The three interpretations are genuinely different and each produces a different action; the data points are local and dated; at least one named example is included; the seller facing a genuinely slow market gets a changed strategy, not reassurance; nothing predicts the future.

5.5 — "Let Me Talk to My Partner"

```
A client wants to bring their partner into the decision before going further. I want to include that person properly instead of waiting and hoping.

Client: {{client_name}} · their role in the transaction: {{client_role}} · what they have already decided: {{their_decisions}}
Their partner's likely concerns, based on what the client has said: {{partner_concerns}}
Transaction type and stage: {{transaction_stage}} · timeline pressure: {{timeline}}
Verified facts that will matter to both of them: {{shared_facts}} · comparables: {{comparable_sales}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. A spoken response in the moment, 3 to 5 sentences: accept it as normal and even important, thank them for bringing their partner in, ask one question about what the partner will want to weigh most so I can prepare the right material, and offer to meet both of them with everything laid out in one place.

2. A triad meeting agenda as a markdown table: topic | what I present | who decides | time. Cover: the financial picture, the property facts, the market data and comparables, the risks on both sides, the timeline and the next decision.

3. A pre-meeting email to both people, 120–160 words, with the agenda summarized, the data I will bring, and one specific request: that they both read the comparison before the meeting so the time goes to questions, not to facts.

4. A one-line note on handling a disagreement between the two of them — address the decision criteria rather than the people, and never take sides.

5. A separate short follow-up email for the partner alone, 80–110 words, that invites their questions directly and states that the client has asked me to include them.

Rules: no fair-housing characterizations, no legal or lending conclusions, no pressure on the decision-maker, and never guess what the partner will say — prepare for the concerns you have actually been given.
```

How to use: Send the pre-meeting email to both people at the same time so neither feels like an afterthought, and keep the agenda visible on screen during the meeting. If the partner cannot attend, offer a short call with them alone rather than pushing the client to relay.
What good looks like: The agenda assigns a decision to each topic; the pre-meeting email asks for one concrete preparation step; the partner follow-up addresses them directly by name; you have prepared for the concerns actually raised, not a guess; disagreement is handled by returning to decision criteria.

5.6 — "We're Not Ready to List Yet"

```
A seller is not ready to list. I want to understand the actual reason and find out whether it is timing, price, condition, or a life decision — because each one can be handled differently.

Seller: {{seller_name}} · property: {{property_address}} · their words: {{seller_objection_words}}
Reason given: {{stated_reason}} · what I believe the real reason is: {{my_assessment}}
Their likely trigger events: {{trigger_events}} · the timeline they mentioned: {{seller_timeline}}
Current market data for their area: {{market_data}} · comparable sales: {{comparable_sales}}
What they would need to do to feel ready: {{readiness_steps}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. Four diagnostic questions that distinguish: not ready because the timing is wrong, not ready because they want a higher number, not ready because the home is not ready, not ready because they are emotionally not ready to move. For each, note what the answer means and the follow-up action.

2. A spoken response, 5 to 7 sentences, that acknowledges the reason without arguing, reflects the underlying concern accurately, connects it to one relevant fact from {{market_data}} or {{comparable_sales}}, and proposes one specific next step with a date — a review of what would need to happen, a check-in at a specific milestone, or a preparation plan.

3. A "readiness plan" as a markdown table: step | why it matters | cost or effort | owner | target date. Include only steps that genuinely move the seller toward listing, drawn from {{readiness_steps}}.

4. A trigger-based follow-up plan as a markdown table: trigger event | when I reach out | message angle. Use real trigger events — a lease ending, a school year starting, a job change, a seasonal deadline, or the sale of a comparable home.

5. A one-line instruction for my CRM: the date and reason to stop following up, so a "not ready" lead does not become a nuisance.

Rules: no artificial urgency, no invented deadlines, no fair-housing characterizations, no claim that waiting will cost them money unless I can source it, and no repeated push after they have asked for space.
```

How to use: Agree to the timeline they set and record it in the CRM immediately. Set the follow-up against a real trigger event rather than a fixed weekly drip, and honor a "not now" with actual silence.
What good looks like: The diagnostic questions separate four different reasons; the readiness plan has an owner and a date on every step; the follow-up plan triggers on real events from their life; the CRM note prevents you from following up after they asked for space; nothing implies the market punishes them for waiting.

5.7 — "Your Commission Is Too High"

```
A seller challenged my commission. I need to show the value of what I am doing with real numbers,
without attacking anyone else's fee.

Seller: {{seller_name}} · property: {{property_address}} · their words: {{seller_objection_words}}
· what they believe an agent does: {{their_belief}}
My actual fee structure: {{fee_structure}}
What I did for this seller so far, with real numbers: {{service_delivered}} · {{marketing_spend}} ·
{{showings_generated}} · {{qualified_leads}} · {{days_on_market}}
My verified results and service commitments: {{credentials_and_commitments}}
What is included in my fee: {{fee_includes}}
Agent name and phone: {{agent_name}}, {{agent_phone}}

Write:
1. An email, 150–200 words. Structure: acknowledge that the fee is a real number they should
understand, give the dollar amount plainly, list what is included in a short markdown table
(services and their real cost to me), give the value in numbers I have already delivered rather
than promises, address their belief directly and honestly — including where I do not do the work
personally — and close with one question: whether they want a written breakdown before deciding.

2. A cost-comparison table: item | estimated cost if done separately | my fee covers this. Cover
photography, staging, marketing, showings, negotiation, transaction coordination, and compliance.
Mark each estimate as an estimate and use real local figures where I have them.

3. A short spoken response for the call, 4 to 6 sentences, that does not defend the fee emotionally
and does not badmouth cheaper options.

4. A one-line rule: what I will adjust (a reduced or deferred fee, a flat fee, a performance-based
component) and what I will not do (work that is not described in the agreement, or services I do
not deliver).

5. A one-line note on checking the brokerage's rules and the engagement agreement before I send
anything.

Rules: every number must be one I can substantiate; no disparagement of other agents or their fees;
no guaranteed outcome; no claim that my fee saves money without showing the arithmetic; no legal
conclusion about fee negotiability.
```

How to use: Send the breakdown in writing and attach the engagement agreement so the numbers match the contract. If the objection is really about trust in the outcome, address that directly rather than only defending price.
What good looks like: The dollar amount is stated up front; the table separates included services from estimates of what else would cost; the value claim uses work already delivered, not promises; you are willing to discuss a fee structure change; the email and the engagement agreement agree on every number.

5.8 — Objection Classifier and Response Builder

```
I have raw objections from my buyers and sellers. Sort them, and then build a specific reply for each distinct one.

Raw objections:
{{paste objections here}}

Context I have: my market is {{market_area}} · my current listings: {{current_listings}} · my services: {{services}} · my recent results: {{results}}
What I know about each person: {{person_details}}
Rules I must follow for every reply: no fair-housing characterizations, no fabricated urgency, no claims about competing buyers unless true today, no pressure, and every factual claim must come from my inputs.

Output:
1. A markdown table: objection (verbatim) | category | what they are really saying | urgency (hot / warm / cooling) | the single best next action | channel. Categories to use: price too high, payment too high, value not clear, timing, financing, already has an agent, needs to think, decision-maker, not ready, market conditions, agent fee, trust or track record, service or communication, property condition or issue, timing of the offer, and anything you cannot categorize — put it in "other".

2. For each objection in the table, write a reply under 130 words. Use the specific facts from my inputs for that person. Address what they are really saying, not just the words. End each reply with one question or one action.

3. A short list of the three objections from this batch that I should handle personally by phone, and why those three.

4. A one-line note on any objection that suggests I am not the right fit for this client, so I can refer them out with confidence.

Rules: do not invent context for any objection; if an objection lacks enough detail to answer, write a clarifying question instead of a reply and mark it [NEEDS CONTEXT]. No reply may contain a claim not supported by my inputs.
```

How to use: Paste in a batch of real objections after a week of calls and use the table to set your follow-up priorities and CRM tasks. Reuse the classifier on objections you have not heard yet so your response language stays consistent.

What good looks like: Every objection is categorized by meaning rather than by wording; the "really saying" column names the underlying concern; hot objections get a phone call and cooling ones get a low-frequency check-in; the reply for each one is under 130 words with one clear next step; the refer-out note is honest.

Pricing & Valuation Conversations

Prompt 1: Explain your comparative market analysis (CMA) to a seller

```
{{seller_name}} is deciding whether to list {{property_address}}. They have never seen a
comparative market analysis before. Explain how a CMA works in plain language that a non-agent can
follow.

Frame it as a method, not a number. Cover:
1. What a CMA is and is not (a valuation tool, not an official appraisal).
2. The three inputs I use: recent closed sales (comps), active competition currently on the market,
and absorption rate (how fast homes like theirs sell).
3. How I select comps: {{neighborhood}}/{{radius}}, similar {{beds}}/{{baths}}/{{sqft}}, sold
within the last {{months}}.
4. Why adjustments matter (an extra bathroom, a finished basement, a new roof, a corner lot) and
how each shifts the number.
5. That this produces a range, not a single number, and why.

Keep it under 250 words, use a simple analogy for "comps" (e.g. "like comparing your car to the
same make and model, same mileage, sold in the last few months"), and end with an invitation to
walk through the actual comps together.
```

How to use: Run this before a listing appointment or valuation call so you can speak to your process without thinking. Paste your actual comps into the placeholders for the live conversation.
What good looks like: The seller walks away able to explain your method to their spouse. They understand why there is a range, not a single number, and why the number is not just "what Zillow says."

Prompt 2: Respond to "why is my home worth less than the online estimate"

```
{{seller_name}} pulled an online estimate ({{online_estimate}}) for {{property_address}} and it is
{{amount}} above the price I just recommended ({{recommended_price}}). They are upset and
skeptical.

Write a calm, data-first response that:
1. Acknowledges the number without dismissing them — it is public and they looked it up.
2. Explains what automated estimates actually are: algorithm-driven models built from broad county
and MLS data, not an inspection of their specific home, and often slow to register a recent sale or
a needed repair.
3. Shows where my number comes from: {{comparable_1}}, {{comparable_2}}, {{comparable_3}} — each
sold within {{radius}} in the last {{months}}, each adjusted for {{feature_differences}}.
4. Gives them two ways to be confident: I can walk them through every comp, or we can get a
licensed appraiser's opinion.
5. Ends with a choice, not a debate: do they want to review the comps together, or talk about what
would have to be true for the higher number to be real?

Tone: confident, transparent, never defensive, never "my data is right and yours is wrong."
```

How to use: Send this as a follow-up email after a pricing conversation, or use it to prep a call. Pull the three closest comps before you send so you can name them.
What good looks like: The seller understands why the two numbers differ and feels the higher figure was engaged with, not dismissed. The conversation moves forward instead of stalling on the discrepancy.

Prompt 3: The price-increase conversation

```
{{seller_name}} has seen strong showing activity on {{property_address}} and now wants to raise the list price from {{current_price}} to {{requested_price}}.

I believe this is a mistake. Write a message that:
1. Validates the excitement (activity is genuinely a good sign) and names the specific evidence they are reacting to ({{showing_count}} showings, {{offer_activity}}).
2. Gently reframes: activity at {{current_price}} is proof the market likes this price. Raising it now removes the very reason people are coming, and the moment a price goes up, the listing looks emotional to buyers and agents.
3. Offers the data: homes in {{neighborhood}} that raised their price mid-listing took an average of {{days}} longer to sell, and buyers often interpret it as overpricing.
4. Proposes the real lever if they want more money: fetch the strongest offer and negotiate up, or wait for multiple offers and let the market set the price.
5. Ends with a clear next step — "let's look at any offers we have today before we change anything."

Keep it under 200 words, respectful, and peer-to-peer.
```

How to use: This is a "save the deal" conversation, so send it as an email and follow up with a call the same day. Only use it when you genuinely believe the increase will hurt — never just to talk them out of a number.
What good looks like: The seller pauses before raising the price and re-focuses on the offers they actually have. If they still want to test a higher price, they do it with eyes open about the downside.

Prompt 4: Holding out the price — when the seller refuses to drop

```
{{seller_name}} has refused to lower the price on {{property_address}} below {{current_price}}, even though it has been on the market for {{days}} days with {{showing_count}} showings and no offers. Their rationale: {{their_reason}}.

Write a message that respects their decision while making the real mathematics visible:
1. Confirm I will follow their lead — it is their home and their call.
2. Lay out what holding the price is costing, factually: for every {{weeks}} at this price, buyer traffic drops by roughly {{percent}}%, and homes overpriced by more than {{percent}}% of market value take {{days_extra}} longer to sell.
3. Explain the "buyer drift" pattern: the first buyers who saw the home have already moved on, and the new audience sees a stale listing.
4. Present a middle path if they will take it: keep {{current_price}} for another {{days}} days with a specific marketing push ({{marketing_plan}}), and agree in writing now that if it produces no offers, we step down to {{next_price}}.
5. Give them the upside of the plan: they protect the price for a defined window, and they get a pre-agreed exit ramp instead of an open-ended stall.

Tone: supportive, factual, never punitive.
```

How to use: Use when a seller is dug in and you've already made the case to drop. This puts the decision and a defined timeline on the table so you are not stuck negotiating the same number every week.
What good looks like: The seller agrees to a time-boxed plan with a pre-agreed step-down price. You protect the relationship, and the listing stops bleeding time without direction.

Prompt 5: Rent-vs-sell framing for an owner who is moving

```
{{seller_name}} owns {{property_address}} and is moving to {{new_city}}. They are torn between selling and renting it out. Write a balanced, decision-support message that:

1. Lays out the two questions that decide this: what does the cash flow look like as a rental, and what does the equity look like if they sell now.
2. Estimates the rental case: market rent in {{neighborhood}} is about {{monthly_rent}}; after {{estimated_expenses}} (HOA, taxes, insurance, vacancy, maintenance), rough net cash flow is about {{net_cash_flow}} a month.
3. Estimates the sale case: at a {{recommended_price}} sale, after {{estimated_costs}} in commission, closing and concessions, net proceeds are about {{net_proceeds}}.
4. Flags the non-numbers trade-offs: being a long-distance landlord, capital gains treatment, whether they need the equity for the next purchase, and how long they would have to hold the rental to break even on the sale they are deferring.
5. Gives a plain test: "If you would not buy this property as an investment today, holding it 'for the rent' is usually nostalgia, not a strategy."
6. Ends with a conversation, not a verdict: offer to run the full numbers or connect them to a property manager who can quote fees.

Keep it informative and neutral — I am their agent, not their financial advisor, so never state a tax or legal conclusion as fact.
```

How to use: Use when a relocation or life change brings up rent-vs-sell. This keeps you useful even if they choose to rent (you can offer management referrals) and builds trust for the future.
What good looks like: The seller finishes the message able to weigh cash flow against equity with clarity, and knows whether you can still help either way. No invented tax or legal conclusions.

Prompt 6: The cost-of-waiting breakdown

```
{{seller_name}} wants to wait {{wait_period}} before listing {{property_address}}, hoping the market will improve. Write a message that makes the cost of waiting concrete and honest.

Build the breakdown from real, verifiable numbers:
1. Market direction: home values in {{neighborhood}} have changed by {{percent_change}}% over the last {{months}} — show the actual number, and don't overstate it.
2. Carrying costs: each month they wait costs {{monthly_carrying_cost}} in mortgage, taxes, insurance, HOA and utilities they keep paying while they stay.
3. Opportunity cost: if they plan to buy next, waiting can push their purchase price up too ({{explain}}), so the "wait for a better market" logic cuts both ways.
4. What could genuinely improve by waiting: light (if the market is actually turning) and their own readiness (decluttering, repairs, timing a move).
5. A plain bottom line: "You are betting {{monthly_carrying_cost}} a month that waiting will gain more than it costs. Here is what the numbers currently say."
6. Offer to run the same breakdown for a specific wait period they name.

Tone: analytical, never pushy. Present the number and let them decide.
```

How to use: Use when a seller is deferring indefinitely without a plan. Keep the tone service-oriented — you're giving them the real cost of a decision they're already making.
What good looks like: The seller sees the waiting decision as a number, not a vibe, and either commits to a timeline or tells you the real reason for the delay.

Prompt 7: Handle "I think it's worth more" anchored to a neighbour's sale

```
{{seller_name}} points to {{comparable_address}}, which sold for {{comparable_price}}, and insists
{{property_address}} should be worth at least that, or more.

Write a response that respectfully shows why that comparison may not hold:
1. Celebrate the reference — it is a real, nearby sale and a good starting point.
2. Walk through the adjustments that make the homes different:
   - {{comparable_address}} sold at {{price_per_sqft}}/sqft; {{property_address}} works out to
{{our_price_per_sqft}}/sqft.
   - They had {{comparable_feature_differences}} (e.g. a finished basement, a renovated kitchen,
more garage space, a bigger lot) that {{property_address}} does not.
   - They sold {{months_ago}} months ago, before the last {{percent_change}}% market shift.
   - Their listing was on the market {{comparable_dom}} days; ours will need to price to generate
similar activity.
3. Offer the fair test: if we list above the comp, we are betting a buyer will pay a premium for
{{our_differentiators}}. If we list at the comp-adjusted figure, we are betting on multiple offers.
4. End with a concrete either/or: list at {{recommended_price}} and let the market bid up, or list
higher and commit to reviewing the data in {{days}} days.

Tone: collaborative, data-forward, and never condescending about the neighbor's sale.
```

How to use: This is the most common pricing objection, so have it ready. Fill in the two comps with real data before the conversation.
What good looks like: The seller understands that a raw sale price isn't a valuation — square footage, features and timing all matter — and they agree to a defined test instead of a standoff.

Lead Response & Speed-to-Lead

Prompt 8: Reply to a portal enquiry in under 5 minutes

```
A lead ({{lead_name}}) just enquired through {{portal_name}} (e.g. Zillow, Rightmove, Redfin) about
{{property_address}} / {{search_criteria}}. It is {{time_of_day}}. Write the text/email I can send
within 5 minutes of the enquiry.

Rules:
1. Under 90 words.
2. First line names them and the exact property or search they asked about — no generic "thanks for
your interest."
3. Reference the specific thing they asked ({{their_question}} or {{their_interest}}).
4. Answer their specific question immediately if it has a factual answer (price, date, square
footage, availability).
5. End with exactly one next step: either "reply with your phone number and I'll text you the
details" or a question that moves them to qualify: "Are you looking to move in the next 3 months,
or just starting to explore?"
6. No more than one link.

Give me one version for text and one for email, each under 90 words.
```

How to use: Paste this into a saved reply, or run it the moment the enquiry lands. The 5-minute window is the entire point — do not sit on it overnight.
What good looks like: The reply goes out within 5 minutes, names their exact interest, answers their question, and contains one clear path to a phone call or a qualification answer.

Prompt 9: Qualify a lead by budget, timeline and area in the first exchange

```
{{lead_name}} enquired about {{property_address}} / {{area}}. I know nothing about them except
their name and contact info. Write the first reply that qualifies them in one low-friction
exchange.

Include:
1. A warm, specific opening that references exactly what they asked about.
2. Three qualification questions, phrased so they are easy to answer in a text:
   - Budget: "To send you only things that fit, what's the monthly payment range you're comfortable
with?" (or purchase price range)
   - Timeline: "Are you looking to move in the next 3 months, 3–6 months, or just starting to
explore?"
   - Area: "Which neighborhoods are on your list — I have {{area_options}} I can pull for you."
3. A reason to answer now: "If I have those three, I can have a shortlist in your inbox today."
4. Reassurance they are not committing to anything by answering.

Keep it under 140 words, and make the questions feel like help, not an interrogation.
```

How to use: Use for any fresh inbound lead before you send listings. A lead who answers all three is worth a call; one who won't answer a single qualification question is not ready — move them to a nurture sequence instead.
What good looks like: The lead answers at least two of the three questions, and you now know budget, timeline and area well enough to send a genuinely relevant shortlist rather than a spray of listings.

Prompt 10: Handle "just browsing"

```
{{lead_name}} said they are "just browsing" or "not ready yet" when I tried to qualify them. Write
a reply that keeps the relationship alive without being pushy.

Include:
1. Genuine acceptance — "that's completely fine" — no "are you sure?"
2. Permission to be in their orbit: offer to be their eyes on the market rather than their
salesperson.
3. One concrete deliverable that adds value right now: a shortlist of {{3}} properties that match
{{their_criteria}}, a {{neighborhood}} snapshot, or a "what I'd watch for in the next 90 days"
market note.
4. A low-pressure way to stay connected: "Want me to send you a monthly note on {{area}}? I'll keep
it short and you can read it whenever."
5. What to do if they don't engage: "If I don't hear from you, I'll check in once in a couple of
months — no more than that."

Tone: warm, unbothered, genuinely useful. Under 130 words.
```

How to use: Use when a lead says not-ready yet. Never argue with "just browsing." You are trying to earn the right to be their go-to when they are ready.
What good looks like: The lead accepts the monthly note, and you have an ongoing, low-effort reason to stay in touch until their timeline matures.

Prompt 11: Respond to a competitor's listing

```
{{lead_name}} sent me a listing they found — {{competitor_listing_url}} — listed by another agent
at {{competitor_price}} in {{area}}. They asked what I think of it.

Write a reply that:
1. Thanks them for sharing it and confirms I'll take it seriously.
2. Gives an honest, useful assessment of the property itself: condition, value relative to
{{comp_list}}, and any red flags (e.g. days on market, price changes, known issues).
3. Positions me as helpful without trashing the other agent: "I can't speak to how they work, but
here's my read on the deal."
4. Adds value the other agent hasn't: a fair-value estimate for the property, what I'd offer and
why, or what questions to ask at a showing.
5. Politely routes the relationship to me: "If you'd like, I'll represent you on this property — I
can write the offer and make sure you're protected."
6. Ends with one next step: "Want me to pull the comparable sales and tell you what it's really
worth?"

Tone: helpful, confident, never petty about the competitor. Under 200 words.
```

How to use: This is how you win buyers who are already looking elsewhere — be useful, not territorial. Never criticize the other agent personally; critique the deal.
What good looks like: The lead trusts your impartial read, asks for the comparable analysis, and now has you — not the other agent — as their advocate on the property they found.

Prompt 12: The speed-to-lead text (first touch)

```
I just received a lead: {{lead_name}}, source {{lead_source}}, interested in {{interest}}. Write
the very first text to send within the first 5–10 minutes.

Rules:
1. Under 70 words — a text, not an email.
2. Identify myself and my brokerage in the first line ({{agent_name}}, {{brokerage_name}}).
3. Name exactly what they asked about — no generic greeting.
4. Offer immediate value or an immediate question, not both at length.
5. End with a single, easy reply: e.g. "What time works for a 2-minute call today — or should I
text you a couple of listings instead?"
6. No links, no attachments, no "!". Sound like a person texting a person.

Give me two options: one for a daytime enquiry, one for an evening/weekend enquiry.
```

How to use: First-touch texts are the single highest-leverage message in your whole business. Send within 10 minutes. If they reply, you are talking to a person, not a form.
What good looks like: The lead replies with either a call time or a yes to listings. The text reads like a helpful human, not a marketing blast, and names the exact thing they asked about.

Prompt 13: Re-engage a lead who went quiet

```
{{lead_name}} enquired about {{area}} {{days}} days ago. I replied, and they have not responded since. Write a re-engagement message that does not sound desperate.

Include:
1. A subject line / opening line that makes it okay they went quiet: "No pressure — just leaving this here."
2. New value, not a repeat of the last message: a genuinely new listing, a market change, or a useful resource ({{new_value}}).
3. One question that is easy to answer and low-commitment: "Still looking in {{area}}, or did life take you a different direction?"
4. A graceful out: "If you've already found a home or gone a different route, just say the word and I'll stop reaching out."
5. A note that you'll check in once more in a few weeks and then leave them be — then actually do that.

Keep it under 120 words and make it feel like a thoughtful human following up, not a drip campaign.
```

How to use: Send this once, roughly 5–7 days after no reply. If they still don't respond, honor it and stop. One well-timed, graceful follow-up beats five nagging ones.
What good looks like: Either the lead re-engages or they tell you to stop, and you respect it. You never burn a relationship you might need in 18 months.

Social Media Content

Prompt 14: Instagram caption for a new listing

```
I'm posting {{property_address}} on Instagram as a new listing. Write the caption.

Details: {{beds}} bed, {{baths}} bath, {{sqft}} sq ft, built {{year_built}}, listed at {{list_price}}, in {{neighborhood}}, {{city}}.

Rules:
1. Hook in the first line that makes someone stop scrolling — a specific, true detail about the home, not "beautiful home for sale."
2. Max 220 characters for the visible portion; that is the part that matters.
3. Include the verified specs and exactly one lifestyle detail (how life actually works in the space).
4. No subjective neighborhood claims (no "safe," "great schools," "family-friendly").
5. Exactly one call to action: "DM 'INFO' and I'll send the full list + photos."
6. 3–5 relevant hashtags, two of them local (e.g. #{{city}}RealEstate).
7. A compliance line if your market requires one ({{local_rules}}).

Give me one main caption plus a shorter 100-character alternative.
```

How to use: Post this within 24 hours of the listing going live. Pair it with the best interior shot, not a photo of the front door from a car.
What good looks like: The caption names a specific, true hook and makes people DM for details — genuine interest, not vanity likes. Every claim traces to the listing sheet.

Prompt 15: Carousel for a home feature

```
I want an Instagram carousel (up to 8 slides) that explains one standout feature of
{{property_address}} properly. The feature is {{feature_name}} ({{feature_details}}).

Build the slide-by-slide outline:
1. Cover slide: a hook headline for the feature that makes someone swipe.
2. What it is: the verified specifics ({{feature_specs}}).
3. Why it matters: the real-life way a buyer would use it.
4. Proof: the detail you can verify against the listing sheet or seller disclosure.
5. A second angle: one more element of the same feature ({{feature_element_2}}).
6. The objection: the most common buyer worry about this feature, answered.
7. The payoff: how it makes life in the home better.
8. CTA slide: "Comment 'DETAILS' and I'll send the full feature list."

For each slide, give the headline and a 1–2 sentence body. Keep claims verifiable — no invented
specs.
```

How to use: Run this for one feature per listing (kitchen, primary suite, backyard, garage, energy systems, etc.). Post 2–3 per week during the listing's active period.
What good looks like: Slide 6 answers a real objection, slide 4 cites a source, and the caption drives a keyword comment so the platform reports genuine interest — not just a scroll-by.

Prompt 16: Reel script for a room tour

```
I'm filming a 20–30 second Reel/TikTok room tour of {{property_address}}. Write the shot list and
voiceover script.

Structure:
1. Hook (0–3s): the single most visually arresting detail of the home, on screen in the first 3
seconds with a text overlay.
2. Room-by-room beat (3–20s): 3–4 quick cuts, each 4–5 seconds, with a one-line voiceover per room:
{{room_1}}, {{room_2}}, {{room_3}}, {{room_4}}.
3. Close (20–30s): the money shot, then a text card: "Link in bio for full tour | DM 'TOUR' for the
price & details."
4. Voiceover: under 60 words total, written for how people actually talk, not listing copy.
5. Text overlays: one short keyword per cut (max 3 words each) so it works on mute.

Format as a table: timestamp | shot/visual | voiceover | on-screen text.
```

How to use: Hand this to whoever films, or use it as your own shot list. Film the hook first — if the first 3 seconds don't grab, the rest doesn't matter.
What good looks like: The reel holds attention past 3 seconds, works on mute with text, and ends on a clear call to action that moves people to your bio or DMs.

Prompt 17: Story sequence for an open house

```
I have an open house at {{property_address}} on {{open_house_date}} from {{start_time}} to
{{end_time}}. Write a 6-frame Instagram Story sequence to promote it.

Frame by frame:
1. Teaser (Day −2): one strong B-roll moment from inside the home + "Open house is coming."
2. The invite (Day −1): date, time, address, one line on why it is worth the trip, and "Drop a ❤️
to RSVP."
3. The logistics (Day 0 morning): "Doors open at {{start_time}} at {{property_address}} — come say
hi, I'll walk you through the whole place, no pressure."
4. Live day content: what to show during the event (one detail that will look good on camera, a
reaction moment, the sign-in table).
5. The wrap (Day +1): a thank-you frame plus a hook to the next step: "Missed it? DM 'TOUR' and
I'll get you in this week."
6. One slide should be a countdown sticker or question sticker to drive engagement.

Keep every frame under 40 words and write in a natural, personal voice.
```

How to use: Schedule frames 1–3 ahead of time; film frames 4–5 live. Stories are ephemeral, so each frame needs to stand alone.
What good looks like: You get actual RSVPs from the heart sticker, and the post-event frame converts missed visitors into private-tour requests instead of letting them evaporate.

Prompt 18: LinkedIn post for a market update

```
I'm posting a monthly market update for {{area}} on LinkedIn. Write the post.

Data I have (all verified): median sale price {{median_sale_price}} (up/down {{percent_change}}% vs
last year), average days on market {{dom}}, inventory {{inventory_count}}, new listings
{{new_listings}}, sold {{sold_count}}.

Rules:
1. Open with one specific, true insight from the numbers — not "here's the latest market update."
2. Lead with the insight in the first line, then the supporting numbers, then what it means for
buyers and sellers.
3. Write for professionals: credible, concise, no hashtag-stuffing.
4. Include a line about what you're seeing anecdotally in the field, clearly labeled as such.
5. End with a soft invitation to discuss what it means for their situation — not a hard pitch.
6. Keep the whole post under 150 words in the main body.

Give me the post plus a subject-line-style first line option.
```

How to use: Post once a month on the same day (e.g. the first Tuesday) so your network learns to expect it. This is a credibility asset, not a listing ad.
What good looks like: The post gets comments from people asking what it means for their neighborhood or situation — proof it read as expert insight, not an ad.

Prompt 19: Facebook listing post + local area spotlight

```
I'm posting {{property_address}} on Facebook. Write two posts:

Post 1 — The listing (photo + text):
- Hook line that names a specific, true detail.
- Verified specs: {{beds}} bed, {{baths}} bath, {{sqft}} sq ft, {{list_price}}.
- One lifestyle detail.
- "Message me for the full gallery or to book a showing."
- Keep under 120 words.

Post 2 — Local area spotlight (no property, just the neighborhood):
- Choose a factual, interesting angle on {{neighborhood}}: a new local business, an upcoming event, a transit or commute fact, or a development ({{local_angle}}).
- Share it neutrally and factually — no res claims, no "great schools."
- End with a light, non-salesy line: "Happy to answer any questions about the neighborhood — I live here."

Both posts must avoid fair-housing-sensitive language entirely.
```

How to use: The listing post should go out the day it goes live. The area spotlight goes into a weekly rotation — it keeps your page alive between listings.
What good looks like: The listing post uses a real photo and a true hook; the area post builds local authority without steering or exclusivity claims. Both feel like a knowledgeable neighbor, not an ad mill.

Referral & Sphere of Influence

Prompt 20: Past-client referral ask

```
{{past_client_name}} closed on {{property_address}} {{time_ago}} ago. The file went well. Write the referral-ask message.

Rules:
1. Open with a genuine, specific thank-you and a brief memory of their move (what they were excited about), not a form letter.
2. Make the ask specific and easy: "Do you know anyone who is thinking of selling or buying in the next 6–12 months?"
3. Give them an easy out: "If no one comes to mind, that's completely fine."
4. Remove the awkwardness: "If someone does, I'll take care of the first conversation — you'd just give them my name and number."
5. Ask for one person, not "anyone you know."
6. End with a warm sign-off and your contact block.

Under 160 words. Send as an email or a thoughtful text.
```

How to use: Send this only to clients whose experience was genuinely smooth and who received good communication. Timing matters: 45–90 days after closing, and again annually on the anniversary of their closing.
What good looks like: The ask is specific, low-pressure, and gives the client an easy out — they don't feel guilted into vouching. A client who says yes becomes a referral source for years.

Prompt 21: Agent-to-agent referral

```
I have a client ({{client_name}}) who is relocating to {{new_city}} and needs an agent there. I
want to reach out to a trusted agent I know ({{other_agent}}, {{other_brokerage}}) and pass the
referral thoughtfully.

Write the message:
1. Warm, specific greeting — reference how we know each other ({{connection}}).
2. Briefly describe the client and what they need: {{client_situation}}, desired area {{area}},
timeline {{timeline}}, budget {{budget}}.
3. Be clear about what I'm asking: "Would you be open to helping them, and how do you like to
handle referrals?"
4. Offer reciprocity: "Happy to return the favor for any client you have coming this way."
5. Note any fee-split or referral arrangement I'm comfortable with ({{referral_terms}}) — or ask
how they prefer to structure it.
6. Keep it professional, concise, and under 160 words.
```

How to use: Use for out-of-area movers. This is a peer relationship, so keep it collaborative and reciprocal. Brokerage rules on referral fees vary — confirm your own brokerage's policy before promising a split.
What good looks like: The other agent replies warmly and takes the client, and you've started a reciprocal channel — the same agent sends clients back to you in return.

Prompt 22: Contractor and vendor referral partnership

```
I want to build a referral relationship with a trusted local service provider ({{vendor_type}},
e.g. a home inspector, lender, contractor, stager, or cleaner). Write the outreach message.

Include:
1. A genuine opening that names how their work helps homeowners in the area.
2. A specific, concrete reason I'm reaching out: I see their name come up / I've seen their work on
{{project_reference}} / I refer clients to people I trust.
3. What I can offer them: I routinely have clients who need {{service}}, and I'd rather recommend
someone I'd trust with my own home.
4. What I'm asking: not a sales pitch — just a conversation about whether they'd like to be a
vetted referral partner.
5. A proposed first step: a 15-minute coffee/phone to see if we're aligned, and what we each
expect.
6. Keep it respectful, useful, and no-pressure — the value flows both ways.

Under 180 words.
```

How to use: Build a vetted shortlist of 3–4 vendors per category (lender, inspector, stager, cleaner, handyman). Refer them, and they refer you — but only recommend people whose work you've actually seen.
What good looks like: You get a partner who sends you clients and gives your own clients white-glove service. Your personal recommendation list becomes a genuine differentiator, not a random directory.

Prompt 23: Neighbour referral

```
I just closed on {{property_address}} for {{buyer_name}}. They are moving into {{neighborhood}},
which is a tight-knit area. Write a message to the neighbors to build goodwill and open the
referral door.

Include:
1. A warm introduction: I'm {{agent_name}}, the agent who helped the new owners at
{{property_address}} settle in.
2. Keep the focus on the neighbors, not me — what I'm really doing is helping the new people become
good neighbors.
3. A light, useful offer: if they (or a friend/family member) ever need help with a home question —
buying, selling, or just "what's my place worth" — I'm a local resource and happy to help.
4. No hard sell. No "I'd love your business." Just a genuine local-contact intro.
5. A soft way to connect: email or text, and my contact block.
6. Keep it under 140 words, warm and neighborly.
```

How to use: Send this in the first weeks after a close — neighbors are a natural referral pool. A local agent who is genuinely visible and helpful gets the call when someone's aunt wants to move to the street.
What good looks like: You establish a friendly local presence without selling, and neighbors start thinking of you as the agent who "knows the area" — the first person they mention when someone asks about moving nearby.

Prompt 24: Sphere-of-influence activation email

```
I have a list of contacts who know me but haven't heard from me in a while ({{sphere_size}}
people). I want to send a one-time reactivation email to start a relationship. Write it.

Include:
1. A personal, specific opening referencing how I know them ({{connection}}).
2. A short, honest update on what I've been up to / how I work now ({{whats_new}}).
3. A clear, easy ask that invites a reply without pressure: "If you or someone you know is ever
curious about the market, I'm a resource — no obligation. What would you like to know about
{{area}}?"
4. A light, memorable closer (even just "here's my number — save it") that makes me easy to reach.
5. No attachments, no links, no hard offer. Under 170 words.
```

How to use: Send this as a one-time broadcast to your sphere — then follow up individually with anyone who replies. This is a relationship opener, not a marketing blast, so keep it personal.
What good looks like: A meaningful number of replies — even just "good to hear from you" — and you've re-opened a channel that will yield referrals and future business for years.

Prompt 25: Center-of-influence top-of-mind touch

```
{{center_of_influence}} (e.g. a local business owner, financial advisor, or community figure) could
be a consistent referral source. I want a recurring, low-effort touch that keeps me top-of-mind
without being salesy.

Design a sustainable cadence:
1. Monthly: share one genuinely useful, relevant piece of information (a market number, a local
event, a useful resource) — not a pitch.
2. Quarterly: a short personal check-in, referencing something specific about their world
({{their_world}}).
3. Twice a year: a meaningful drop-by or gift with no ask attached ({{gift_idea}}).
4. Never more than one touch per month, and never a hard referral request unless they invite it.
5. Provide 3 ready-to-send message templates for the monthly touch, each under 60 words and each
with a "why it helps them" angle.

Keep it genuinely generous — the goal is to be remembered as useful, not as a salesperson.
```

How to use: Set this as a recurring task in your CRM and actually honor the cadence. One center-of-influence who refers consistently can out-produce a whole cold list.
What good looks like: The person starts proactively asking about your market or sending you their contacts — you've become the agent they think of first, because you were useful first.

Database Reactivation

Prompt 26: Expired listing reach-out

```
{{seller_name}} had their listing with another agent expire after {{days_on_market}} days without a sale. I want to reach out respectfully — not to trash the other agent, but to open a conversation.

Write the message:
1. Acknowledge the frustration or letdown they may feel — selling is hard and an expired listing is disappointing.
2. Avoid criticizing the previous agent. Say: "I don't know the details of your prior experience, and I won't guess." Position that as a strength: I'm asking questions, not assuming.
3. Ask what they learned: what feedback did they get on price, showings, photos, marketing? What would they do differently?
4. Offer a fresh, concrete first step that costs them nothing: a free, no-obligation review of their home's current market position and what I'd do differently ({{proposed_first_step}}).
5. End with a low-pressure question: "Would a 15-minute conversation to compare notes be worth it?"

Tone: empathetic, professional, curious. Under 200 words. Email or a thoughtful text.
```

How to use: Expired listings are one of the highest-converting sources there is — the seller is motivated and already listing-ready. Send this within days of the expiration.
What good looks like: You get a conversation, not a sale pitch. The seller's guard is down because you didn't attack the previous agent — you asked what they learned and offered help.

Prompt 27: Past-client annual check-in

```
{{past_client_name}} bought/sold {{property_address}} about a year ago. Write the annual check-in message.

Include:
1. A warm, specific opening that references their actual transaction or move (what they were excited about), not a form letter.
2. A quick, useful value-add: how the market in their area has moved since they bought ({{market_change}}), and what that means for their home's value.
3. A light check-in on their life now: "How did the first year in the house treat you?"
4. One easy, non-pushy question: "Has anything changed — a growing family, a job move, thinking about upgrading?"
5. A soft, open invite: "If you ever want a ballpark figure on your home or just to talk options, I'm a call away."
6. Keep it warm, personal, and genuinely caring — under 140 words.
```

How to use: Send around the anniversary of their closing, ideally paired with a small touch (a handwritten card or a quick call). This is your highest-intent list.
What good looks like: A meaningful portion reply with life updates — many of which are early signals of an upcoming move. You've layered a real relationship on a past transaction.

Prompt 28: Old buyer who never bought

```
{{lead_name}} was a serious buyer {{time_ago}} ago — they got pre-approved, looked at homes, but never purchased ({{why_they_stopped}}). Write the re-engagement message.

Include:
1. Reference the specifics of their search — the area they wanted, the kind of home, and acknowledge the gap (life happened, the market shifted, etc.).
2. Acknowledge the market has changed since: {{market_change}} — and what that means for them today.
3. A genuinely useful update: what's available now in their old criteria, and how the affordability picture looks ({{current_budget}} vs. what it was).
4. One easy, low-commitment question: "Are you still thinking about buying, or has the plan changed?"
5. Gracefully offer the door: "If you're not, no worries — but I'd love to know how you're doing."
6. Keep it under 150 words, warm and curious, not pushy.
```

How to use: Run this probe your list of buyers who got serious but didn't close. Many have re-entered the market by now — they just haven't told you.
What good looks like: You hear back from a slice of them, some of whom are ready to restart the search. Even the ones who say "not now" re-confirm the relationship for the next cycle.

Prompt 29: Former client who moved away

```
{{past_client_name}} sold {{property_address}} and moved to {{new_city}} {{time_ago}} ago. They are now a long-distance former client. Write the check-in message.

Include:
1. Ask how the new city and house are treating them — genuinely, and specifically to their situation ({{their_move_situation}}).
2. Offer real value for their new location: connect them with a trusted agent in {{new_city}} if they need one ({{referral_agent}}), or share a useful fact about the market there.
3. Gently keep the door open for the original area: "If you ever move back this way, or know someone moving to {{area}}, I'd love to help."
4. Acknowledge they now have a life elsewhere and you're not asking for anything — just keeping the thread.
5. Keep it warm, personal, and under 140 words.
```

How to use: Send this yearly or after learning they've settled. Long-distance former clients become referral sources to the area you serve — and you can return the favor with a referral in their new city.
What good looks like: They feel remembered, not prospected. And when a friend or coworker mentions moving to your area, your name — the one who still checks in — is the first they think of.

Prompt 30: 5-year anniversary reach-out

```
{{past_client_name}} closed on {{property_address}} exactly 5 years ago. Write the milestone anniversary message.

Include:
1. Open with the milestone itself — "It's been five years since you got the keys" — and a specific, warm memory from their transaction ({{memory}}).
2. Reflect on what's changed in the market since ({{market_change_5y}}) and what that likely means for their home's value.
3. Offer a concrete, useful gift: a no-obligation estimate of what their home is worth today, or a quick conversation about their options.
4. Include a gentle, low-pressure invitation: "If you're settled and happy, that's wonderful — but if you're ever curious about your options, I'd love to help."
5. Keep it warm, celebratory, and personal — under 150 words.
```

How to use: Use for the 5-year milestone (and repeat every few years after). At this point, many clients have outgrown their first home and are naturally thinking about a move.
What good looks like: It reads as a genuine relationship milestone, not a marketing email. You reconnect at exactly the moment many clients are ready to consider their next move.

Prompt 31: Stale-lead win-back sequence

```
I have a list of leads who went cold months ago ({{lead_count}} people, last contact {{time_ago}}).
I want a 3-touch win-back sequence that respects their time and doesn't feel desperate.

Build a 3-touch sequence:
1. Touch 1 (Day 0): A short, personal note acknowledging the gap and asking the honest question:
"Are you still looking, or did life take you a different direction?" Under 80 words.
2. Touch 2 (Day 14): A genuinely useful, non-pitch resource: the latest market snapshot for
{{area}}, a new listing that matches their old criteria, or a "what changed in the last 90 days"
note. Under 100 words.
3. Touch 3 (Day 28): A graceful, final touch: "I'll stop reaching out after this unless I hear from
you — but if you're ever ready, I'm here." Under 60 words.

Each touch must feel human and varied — no repeated phrasing. End the sequence cleanly if there's
no reply.
```

How to use: Run this as a one-time win-back campaign, not an ongoing drip. The goal is to clean your database: re-engage the ready, politely retire the rest.
What good looks like: You hear back from a slice of stale leads, and you cleanly stop emailing the rest — so your future outreach is quieter but more effective.

Transaction Management & Closing

Prompt 32: Contract-sent celebration and next steps

```
{{buyer_name}} and {{seller_name}} just signed a contract on {{property_address}} at
{{contract_price}}. Send a celebratory but professional message to both parties confirming the next
steps.

Include:
1. Congratulations — genuine and warm — and name the specific achievement (their accepted offer /
successful negotiation).
2. What just happened in plain language: the contract is signed, it's now in escrow, and here's
what happens next.
3. The timeline of what happens next: earnest money deposit ({{emd_date}}), inspection period
({{inspection_deadline}}), appraisal, financing ({{financing_deadline}}), and closing
({{closing_date}}).
4. What each side needs to do now (provide docs, schedule inspection, etc.).
5. Reassurance of your availability: "I'll be managing every step and I'll keep you posted at each
milestone."
6. Keep it clear and structured but warm — under 220 words.
```

How to use: Send this immediately when a contract is ratified. This is the moment you lock in trust and set expectations so surprises don't derail the deal.
What good looks like: Both parties understand the roadmap and their role in it, and they feel taken care of. The deal proceeds without confusion at each milestone.

Prompt 33: Inspection contingency explanation

```
The inspection on {{property_address}} came back with findings ({{summary_of_findings}}). Explain
the inspection contingency to {{client_name}} in plain language, and outline the options.

Include:
1. What the inspection contingency means in practical terms: it gives the buyer the right to review
findings, negotiate, or walk away.
2. What the findings actually are — translate the inspector's report into plain language for the
client (materials, severity, estimated impact).
3. The options:
   - Accept the property as-is and proceed.
   - Request the seller make specific repairs ({{requested_repairs}}).
   - Request a credit or price adjustment for the issues.
   - Walk away if a material issue makes the deal untenable (only if genuinely warranted).
4. Timeline: how many days remain to respond ({{days_remaining}}), and who needs to act by when.
5. My recommendation and reasoning, clearly labeled as my view, with the client making the final
decision.
6. Keep it calm, clear, and empowering — under 250 words.
```

How to use: Use whenever inspection findings arrive — the most stressful moment in a transaction. Send this promptly and follow up with a call so the client isn't left to panic alone.
What good looks like: The client understands what each finding means and the real choices they have, and they make an informed decision calmly — rather than reacting emotionally to the report.

Prompt 34: Appraisal coming in

```
The appraisal on {{property_address}} came in at {{appraisal_value}} — and there's one of three
outcomes: it matched the contract price, it came in low, or it came in high. Write the message to
{{client_name}} explaining where we are and why it matters.

Cover whichever case applies:
1. Appraisal at contract price: the clean case — the lender is satisfied, the deal proceeds as
planned. Reassure and outline the remaining steps.
2. Appraisal below contract price: explain what this means (the lender will only finance the
appraised value, so the gap is {{gap_amount}}). Lay out the options: renegotiate price, bridge the
gap with a higher down payment, challenge the appraisal, or walk away. Be clear about which are
realistic.
3. Appraisal above contract price: celebrate it — the buyer has instant equity and the deal is in
good shape.

For all cases: explain what an appraisal is and is not, note that it protects the buyer and lender,
and state the next step clearly. Keep it calm, factual, and under 240 words.
```

How to use: Send this the moment you have the appraisal result and follow up by phone. Appraisal surprises derail deals when they're explained poorly — a clear, early explanation keeps it on track.
What good looks like: The client understands the appraisal's role, what their options are, and the recommended path — and feels confident in the decision rather than blindsided by the number.

Prompt 35: Final walkthrough prep

```
We're {{days}} days from closing on {{property_address}}. Write a message to {{buyer_name}}
preparing them for the final walkthrough.

Include:
1. What the walkthrough is for: confirming the property is in the agreed condition, that agreed-
upon repairs are done, and that it's being delivered as promised — not a chance to renegotiate.
2. What to bring: the inspection report, the repair list, phones to document anything of concern,
and a list of agreed items.
3. What to check:
   - Repairs from the inspection are actually completed ({{repair_list}}).
   - Systems work — water, heat, appliances, in.
   - No new damage since the last visit.
   - Personal property and agreed inclusions are present ({{inclusions}}).
4. What to do if something is off: don't sign anything — flag it to me immediately.
5. Reassurance: I'll be there with you, and we'll handle anything that comes up calmly.

Keep it practical and reassuring — under 220 words.
```

How to use: Send this 2–3 days before the walkthrough. A prepared buyer is a calm buyer, and the walkthrough is where last-minute surprises either surface or fizzle.
What good looks like: The buyer arrives with the right checklist, knows what to look for, and flags anything unusual immediately — so issues are caught before closing, not after.

Prompt 36: Key handover message

```
The transaction is closing, and {{buyer_name}} will get the keys to {{property_address}} today.
Write the handover message.

Include:
1. A warm, genuine congratulations — they just bought a home.
2. Explain the plan for keys and access (where and how they'll get the keys, when they can first
access the property).
3. A quick rundown of what's been left for them if applicable (a welcome packet, manuals, garage
remotes, codes, appliance docs).
4. A short list of practical post-move reminders: change locks, update address, utilities
({{utility_notes}}), home insurance, and the first week's priorities.
5. A warm close that makes you the forever agent: "You've got my number — reach out any time, for
anything."
6. Keep it warm, practical, and under 200 words.
```

How to use: Send this on closing day, or hand a printed card with the keys. This moment is the emotional peak of the relationship — make it memorable.
What good looks like: The buyer feels celebrated and prepared, not just handed a key. This message is what earns the 5-star review and the referral ask later.

Prompt 37: Closing gift note and review request

```
The sale of {{property_address}} just closed for {{buyer_name}} / {{seller_name}}. Write a closing-gift note and (separately) a review request message.

Gift note:
- Warm and personal, referencing their specific transaction.
- Explain the gift briefly ({{gift_description}}) and why it's practical for their situation.
- End with an open door and your contact block.

Review request:
- Send a few days after the gift, not in the same message.
- A genuine ask framed around helping others: "If our experience worked for you, a short review helps other buyers and sellers know what to expect."
- Include the direct link ({{review_link}}).
- Explicitly invite them to tell you directly if anything fell short: "If something didn't go the way you expected, I'd rather hear it from you and make it right."
- No incentives, no tying the gift to the review. Keep it under 120 words.
```

How to use: Send the gift note at closing; send the review request 3–7 days later. Never condition the gift on a review — that's prohibited in many jurisdictions and bad practice everywhere.
What good looks like: The client is genuinely touched by the gift, and the review request — separated and pressure-free — converts a happy client into public proof of your work, with an honest escape hatch if anything was off.

Lead Response Playbook

Speed is the single biggest lever in lead conversion. This table tells you exactly what to send first, which prompt to use, and what you want the lead to do — for every source a real-estate lead comes from. Time every first touch. If you can't get to it in the window, send the text version, which is faster.

Lead source	Ideal first response	Use this prompt	Expected action
Website enquiry (your site)	Text within 5 minutes, follow with an email within 60 minutes	Prompt 8, Prompt 9	Reply with call time or answers to the 3 qualification questions
Portal (Zillow / Rightmove / Redfin)	Text within 5–10 minutes, personalized to the exact property they asked about	Prompt 8, Prompt 12	Book a 2-minute call or ask for a listing shortlist
Instagram DM	Reply within 15 minutes in the same thread, casual and specific	Prompt 12	Move the ask to a call or a direct listing-link Dm
Facebook Marketplace	Reply within 15 minutes — same-day, decisive	Prompt 12	Confirm interest, get a viewing window or a phone number
Referral (from a past client or COI)	Call within 2 hours — the referrer has already warmed them	Prompt 9, Prompt 20	Schedule a call or a showing; thank the referrer at once
Open house walk-in	Same-day email or text by evening — they literally met you	Prompt 9, Prompt 12	Book a private tour or add them to the follow-up list
Expired-listing reactivation	Email within 24 hours, empathetic and non-judgmental	Prompt 26	Get a 15-minute calls to compare notes

Lead source	Ideal first response	Use this prompt	Expected action
Past client	Call or personal note within 24 hours of the trigger (anniversary, life change)	Prompt 27, Prompt 30	Reconnect — the goal is relationship, not immediate sale
Sphere of influence	Monthly, value-first touch; personal note on any major life event	Prompt 24, Prompt 25	Stay top-of-mind; earn referrals over time
Phone inquiry (inbound call)	Answer live; if you miss it, call back within 10 minutes	Prompt 9	Qualify on the call and schedule the next step
Zillow/Rapid text (auto-inquiry)	Text reply within 5 minutes, then a call the same day	Prompt 12, Prompt 9	Get them into the 3-question qualification
Trade show / community event	Next-business-day personal follow-up referencing your meeting	Prompt 24	Extend the connection; plant the referral seed
Cold or unqualified list	Warm them over 3 touches before ever asking for anything	Prompt 13, Prompt 31	Move them from cold to a conversation, or retire them cleanly

The rule that matters most: a lead who gets a reply in under 5 minutes is far more likely to respond and far more likely to hire you. Set up text-template shortcuts for Prompts 8 and 12 so a fast reply is one tap, not a five-minute typing session.

Frequently Asked Questions

Q: How do I personalize without spending hours on it?
A: Personalize the two places that matter most — the opening line and the question you ask. Fill in the lead's name, the exact property or area they asked about, and one true detail from their search. The AI does the rest. Budget two minutes a lead, never ten. A fast reply that names their actual interest beats a perfect email that arrives tomorrow.

Q: What do I do if the AI gets a property detail wrong?
A: Fix it before it sends, and cut anything you can't verify. The pack's compliance section and the pre-publish checklist exist exactly for this. Every factual claim — square footage, beds, roof, renovations, price — must trace to the listing sheet, the MLS record, or the seller disclosure. If you can't confirm a detail, delete it. Never send an unverified feature claim to a client.

Q: How many emails before it feels spammy?
A: For leads: stop after three touches if there's no reply, and make the third touch the graceful exit — "I'll stop reaching out unless I hear from you." For past clients, one thoughtful touch a month is plenty, and the annual check-in is the anchor. The rule is: value on every touch, and a clean stop when someone goes silent. A well-timed silent exit protects a relationship a nagging drip would burn.

Q: Should I disclose that I use AI?
A: Check your jurisdiction's and brokerage's rules first — some now require disclosure. Where it's not required, be transparent anyway as a best practice. You don't need a lengthy disclaimer, but don't pass off AI-drafted copy as your own hand-written work. The ethical line is simple: AI drafts, a licensed agent reviews, owns, and sends. That's the model this whole pack is built on.

Q: How do I handle "the market is down"?
A: The single best answer is honest numbers, not optimism. Use Prompt 6 (cost of waiting) and the valuation prompts to show what the market actually did in the buyer's area, month by month. Acknowledge the concern

directly, show the verified data, and reframe: a slower market rewards realistic pricing and a good agent. Never argue with the concern; walk them through the real numbers.

Q: Do these work for rentals as well as sales?
A: Yes, with light tweaks. Use the pricing prompts to explain rental comps instead of sale comps, and the lead-response prompts to qualify tenants by move-in date, budget, and desired area. The listing and social prompts work for rental ads nearly unchanged. For the transaction prompts, swap the language of sale milestones for lease-signing and move-in steps. The underlying job — respond fast, be useful, build trust — is identical.

Free Lifetime Updates

This pack is a living product, not a one-time document. **Every future version is included in your purchase, free and forever.**

That means:
- New prompts as new lead sources, platforms, and market realities appear.
- Updated templates that reflect what actually works as we learn from real agents.
- New artifact formats and bonus sections as we add them.

How to get updates: New versions are delivered automatically to your Gumroad library. You'll be notified when one publishes, and you can always re-download the latest version from your purchases page — no subscriptions, no upsells, no expiration.

Support: Questions about the prompts, a workflow that isn't clicking, or a lead source you want covered? Message us and we'll respond within 24 hours — and the best ideas from real user feedback make it into the next update.

Ultron Server — curated AI toolkits built for real work. No filler, no bloat, no 10,000-prompt dumps. Every product is a focused, profession-specific set you can actually use today.
